Software Product Compatibility Reports

Detailed System Requirements

Product
IBM Security AppScan Source 9.0.3.12

Contents

Included in this report

This report can be generated with filters applied to operating system platforms, components, and/or software capabilities. This section reflects how the report was filtered when it was generated.

Legend

- The information about this item is included in this report.

- The information about this item is not included in the report filter.

Platforms

- Linux
- Mac OS
- **Windows**

Component list

Desktop

- AppScan
- AppScan Source Command Line Client
- AppScan Source for Analysis
- AppScan Source for Automation Client
- AppScan Source for Development plug-in for Eclipse
- AppScan Source for Development plug-in for IBM Rational Application Developer for WebSphere Software (RAD)
- AppScan Source for Development plug-in for Visual Studio
- IBM MobileFirst Platform Application Scanning

Capabilities

Prerequisites

- Development Tools
- Licensing

Related Software

- Application Servers
- Compilers and Languages
- Databases
- Development Tools
- Reporting and Analysis

Component list

Server

- AppScan Source Database

- AppScan Source for Automation Server

- Enterprise Server

Operating Systems

The Operating sysytems section specifies the operating systems that IBM Security AppScan Source 9.0.3.12 supports, organized by operating system familiy.

Operating system families

Windows

Component support

Windows Notes

1. On Windows 8.x, Windows Server 2012, and Windows 2012 R2, the AppScan Source installer (setup.exe file) must be run in Windows 7 compatibility mode. You must also set the AppScan_Uninstaller.exe file to run in Windows 7 compatibility mode before uninstalling AppScan Source. This file is located in <install_dir>\Uninstall_AppScan\AppScan_Uninstaller.exe (where <install_dir> is the location of your AppScan Source installation). See http://www.ibm.com/support/docview.wss?uid=swg21696098 for more information.

2. On 64-bit Windows, Security AppScan Source runs in 32-bit mode. On Windows 8.x, Windows Server 2012, Windows 2012 R2, and Windows 2016 the AppScan Source installer (setup.exe file) must be run in Windows 7 compatibility mode. You must also set the AppScan_Uninstaller.exe file to run in Windows 7 compatibility mode before uninstalling AppScan Source. This file is located in <install_dir>\Uninstall_AppScan\AppScan_Uninstaller.exe (where <install_dir> is the location of your AppScan Source installation). See http://www.ibm.com/support/docview.wss?uid=swg21696098 for more information.

3. On 64-bit Windows, Security AppScan Source runs in 32-bit mode. On Windows 8.x, Windows Server 2012, and Windows 2012 R2, the AppScan Source installer (setup.exe file) must be run in Windows 7 compatibility mode. You must also set the AppScan_Uninstaller.exe file to run in Windows 7 compatibility mode before uninstalling AppScan Source. This file is located in <install_dir>\Uninstall_AppScan\AppScan_Uninstaller.exe (where <install_dir> is the location of your AppScan Source installation). See http://www.ibm.com/support/docview.wss?uid=swg21696098 for more information.

4. On 64-bit Windows, Security AppScan Source runs in 32-bit mode.

5. On Windows 10, the AppScan Source installer (AppScan_Installer.exe file) must be run in Windows 7 compatibility mode. You must also set the AppScan_Uninstaller.exe file to run in Windows 7 compatibility mode before uninstalling AppScan Source. This file is located in <install_dir>\Uninstall_AppScan\AppScan_Uninstaller.exe (where <install_dir> is the location of your AppScan Source installation). See http://www.ibm.com/support/docview.wss?uid=swg21696098 for more information.

Hypervisors

Development Tools Notes
1. AppScan Source for Analysis, AppScan Source for Automation, the AppScan Source Command Line Client, and the AppScan Source for Development plug-in for Visual Studio require a connection to the AppScan Enterprise Server. The AppScan Source for Development plug-ins (for Eclipse and RAD - and including IBM Worklight Appliction Scanning) can be used without the AppScan Enterprise Server. In server mode, you connect to the server to run scans and access shared data. In local mode, AppScan Source for Development runs without ever connecting to a server - but you cannot access shared items such as filters, scan configurations, and custom rules. If you are using a floating license in local mode, you must still have a connection to the license server to be able to use AppScan Source for Development.

Compilers and Languages Notes

1. Java compiler

2. Language can be scanned in IBM Security AppScan Source for Analysis, IBM Security AppScan Source for Development Eclipse plug-in, IBM Security AppScan Source for Automation, and the IBM Security AppScan Source command line interface. Objective-C in Xcode projects. All iOS applications, including those that are configured to run as 32-bit and 64-bit, are scanned as 32-bit.

3. Java EE Application Server OS support is dependent on the OS supported by the application server.

4. Solution (.sln) files from these versions of Microsoft Visual Studio can be imported and scanned. Managed C++ projects are supported. Unmanaged C++ projects are supported if they are built with a Platform Toolset from Visual Studio 2013 or earlier (Platform Toolset V120 or earlier). The C++ Accelerated Massive Parallelism (C++ AMP) language extension is not supported. Applications that use the Windows Driver Kit (WDK) are not supported.

5. Solution (.sln) files from these versions of Microsoft Visual Studio can be imported and scanned. Managed and unmanaged C++ projects are NOT supported. The C++ Accelerated Massive Parallelism (C++ AMP) language extension is not supported. Applications that use the Windows Driver Kit (WDK) are not supported.

6. Java compiler

7. Language can be scanned in IBM Security AppScan Source for Analysis, IBM Security AppScan for Development Eclipse plug-in, IBM Security AppScan Source for Automation, and the IBM Security AppScan Source command line interface.

8. Language can be scanned in IBM Security AppScan Source for Analysis, IBM Security AppScan for Development Visual Studio plug-in, IBM Security AppScan Source for Automation, and the IBM Security AppScan Source command line interface. For Visual Studio 2012 and Visual Studio 2013, the C++ Accelerated Massive Parallelism (C++ AMP) language extension is not supported. Applications that use the Windows Driver Kit (WDK) are not supported.

9. Solution (.sln) files from these versions of Microsoft Visual Studio can be imported and scanned. The C++ Accelerated Massive Parallelism (C++ AMP) language extension is not supported. Applications that use the Windows Driver Kit (WDK) are not supported.

10. Language can be scanned in IBM Security AppScan Source for Analysis, IBM Security AppScan Source for Automation, and the IBM Security AppScan Source command line interface. JavaScript/VBScript

11. Language can be scanned in IBM Security AppScan Source for Analysis, IBM Security AppScan Source for Automation, and the IBM Security AppScan Source command line interface. JavaScript/VBScript

12. Language can be scanned in IBM Security AppScan Source for Analysis, IBM Security AppScan for Development Visual Studio plug-in, IBM Security AppScan Source for Automation, and the IBM Security AppScan Source command line interface.

13. Language can be scanned in IBM Security AppScan Source for Analysis, IBM Security AppScan for Development Eclipse plug-in, IBM Security AppScan Source for Automation, and the IBM Security AppScan Source command line interface. Including support for Android APIs.

14. Language can be scanned in IBM Security AppScan Source for Analysis, IBM Security AppScan for Development Visual Studio plug-in, IBM Security AppScan Source for Automation, and the IBM Security AppScan Source command line interface. For Visual Studio 2012 and Visual Studio 2013 on Windows, the C++ Accelerated Massive Parallelism (C++ AMP) language extension is not supported. Applications that use the Windows Driver Kit (WDK) are not supported.

15. Language can be scanned in IBM Security AppScan Source for Analysis, IBM Security AppScan for Development Visual Studio plug-in, IBM Security AppScan Source for Automation, and the IBM Security AppScan Source command line interface. C#, ASP.NET, VB.NET - Microsoft .NET Framework Versions 2.0, 3.0, 3.5, 4.0, 4.5, 4.6 and 4.7

16. Language can be scanned in IBM Security AppScan Source for Analysis, IBM Security AppScan Source for Automation, and the IBM Security AppScan Source command line interface.

17. Language can be scanned in IBM Security AppScan Source for Analysis, IBM Security AppScan for Development Visual Studio plug-in, IBM Security AppScan Source for Automation, and the IBM Security AppScan Source command line interface. Microsoft .NET Framework Versions 2.0, 3.0, 3.5, 4.0, 4.5, and 4.6

18. Java EE Application Server OS support is dependent on the OS supported by the application server. WebLogic Server 8 is also supported.

19. Language can be scanned in IBM Security AppScan Source for Analysis, IBM Security AppScan for Development Visual Studio plug-in, IBM Security AppScan Source for Automation, and the IBM Security AppScan Source command line interface. C#, ASP.NET, VB.NET - Microsoft .NET Framework Versions 2.0, 3.0, 3.5, 4.0, 4.5, 4.6 and 4.7

20. Language can be scanned in IBM Security AppScan Source for Analysis, IBM Security AppScan for Development Eclipse plug-in, IBM Security AppScan Source for Automation, and the IBM Security AppScan Source command line interface. Including support for Android APIs.

21. The C++ Accelerated Massive Parallelism (C++ AMP) language extension is not supported. Applications that use the Windows Driver Kit (WDK) are not supported.

22. Language can be scanned in IBM Security AppScan Source for Analysis, IBM Security AppScan Source for Development Eclipse plug-in, IBM Security AppScan Source for Automation, and the IBM Security AppScan Source command line interface. Objective-C in Xcode projects. All iOS applications, including those that are configured to run as 32-bit and 64-bit, are scanned as 32-bit.

23. Language can be scanned in IBM Security AppScan Source for Analysis, IBM Security AppScan Source for Automation, and the IBM Security AppScan Source command line interface.

24. Language can be scanned in IBM Security AppScan Source for Analysis, IBM Security AppScan for Development Visual Studio plug-in, IBM Security AppScan Source for Automation, and the IBM Security AppScan Source command line interface. Microsoft .NET Framework Versions 2.0, 3.0, 3.5, 4.0, 4.5, and 4.6

Development Tools Notes

1. - IBM Security AppScan Source for Development plug-in for Eclipse can be applied to Rational Application Developer for Websphere Software. - Java/JSP projects and workspaces (containing Java/JSP projects) from Rational Application Developer for Websphere Software are supported in IBM Security AppScan Source for Analysis, IBM Security AppScan Source for Automation, and the IBM Security AppScan Source Command Line Client. - IBM Security AppScan Source for Development supports scanning Java (including Android), JavaServer Pages (JSP), and IBM Worklight/MobileFirst Platform projects in supported Eclipse version workspaces. - Worklight/MobileFirst Platform project scan support includes: Native client-side Android and iOS source code, in addition to most user-written JavaScript client-side code. - Worklight/MobileFirst Platform project scan support does not include: Server-side JavaScript code such as Worklight/MobileFirst Platform Adapter code.

2. - IBM Eclipse SDK 3.8 is also supported. - IBM Security AppScan Source for Development plug-in for Eclipse can be applied to the IBM Eclipse SDK. - Java/JSP projects and workspaces (containing Java/JSP projects) from IBM Eclipse SDK are supported in IBM Security AppScan Source for Analysis, IBM Security AppScan Source for Automation, and the IBM Security AppScan Source Command Line Client. - IBM Security AppScan Source for Development supports scanning Java (including Android), JavaServer Pages (JSP), and IBM Worklight/MobileFirst Platform projects in supported Eclipse version workspaces. - Worklight/MobileFirst Platform project scan support includes: Native client-side Android and iOS source code, in addition to most user-written JavaScript client-side code. - Worklight/MobileFirst Platform project scan support does not include: Server-side JavaScript code such as Worklight/MobileFirst Platform Adapter code.

3. - IBM Security AppScan Source for Development plug-in for Eclipse can be applied to Rational Application Developer for Websphere Software. - Java/JSP projects and workspaces (containing Java/JSP projects) from Rational Application Developer for Websphere Software are supported in IBM Security AppScan Source for Analysis, IBM Security AppScan Source for Automation, and the IBM Security AppScan Source Command Line Client. - IBM Security AppScan Source for Development supports scanning Java (including Android), JavaServer Pages (JSP), and IBM Worklight/MobileFirst Platform projects in supported Eclipse version workspaces. - Worklight/MobileFirst Platform project scan support includes: Native client-side Android and iOS source code, in addition to most user-written JavaScript client-side code. - Worklight/MobileFirst Platform project scan support does not include: Server-side JavaScript code such as Worklight/MobileFirst Platform Adapter code.

4. - IBM Security AppScan Source for Development plug-in for Eclipse can be applied to the IBM Eclipse SDK. - Java/JSP projects and workspaces (containing Java/JSP projects) from IBM Eclipse SDK are supported in IBM Security AppScan Source for Analysis, IBM Security AppScan Source for Automation, and the IBM Security AppScan Source Command Line Client. - IBM Security AppScan Source for Development supports scanning Java (including Android), JavaServer Pages (JSP), and IBM Worklight/MobileFirst Platform projects in supported Eclipse version workspaces. - Worklight/MobileFirst Platform project scan support includes: Native client-side Android and iOS source code, in addition to most user-written JavaScript client-side code. - Worklight/MobileFirst Platform project scan support does not include: Server-side JavaScript code such as Worklight/MobileFirst Platform Adapter code.

5. - IBM Security AppScan Source for Development plug-in for Eclipse can be applied to the IBM Eclipse SDK. - Java/JSP projects and workspaces (containing Java/JSP projects) from IBM Eclipse SDK are supported

in IBM Security AppScan Source for Analysis, IBM Security AppScan Source for Automation, and the IBM Security AppScan Source Command Line Client. - IBM Security AppScan Source for Development supports scanning Java (including Android), JavaServer Pages (JSP), and IBM Worklight/MobileFirst Platform projects in supported Eclipse version workspaces. - Worklight/MobileFirst Platform project scan support includes: Native client-side Android and iOS source code, in addition to most user-written JavaScript client-side code. - Worklight/MobileFirst Platform project scan support does not include: Server-side JavaScript code such as Worklight/MobileFirst Platform Adapter code.

6. IBM MobileFirst Platform projects in supported Eclipse version workspaces can be scanned. Scan support includes: Native client-side Android and iOS source code, in addition to most user-written JavaScript client-side code. Scan support does not include: Server-side JavaScript code such as MobileFirst Platform Adapter code. To be able to scan Android code in your IBM MobileFirst Platform projects, you must use the Android Developer Tools (ADT) Eclipse plug-in for Android application development.

7. IBM Security AppScan Source for Development plug-in for Visual Studio can be applied to Microsoft Visual Studio 2012 Professional, Premium, and Ultimate - and used for scanning Microsoft Visual Studio solutions and project files. Solution and project files from Microsoft Visual Studio can be scanned in IBM Security AppScan Source for Analysis, IBM Security AppScan Source for Automation, and the IBM Security AppScan Command Line Client. This version of Microsoft Visual Studio is also a supported compiler for AppScan Source. The C++ Accelerated Massive Parallelism (C++ AMP) language extension is not supported. Applications that use the Windows Driver Kit (WDK) are not supported.
Reporting and Analysis

Reporting and Analysis Notes

1. HP Quality Center 11.0 is supported up to Fix Pack 5 (Version 11.5). Defect Tracking System

2. Required for exporting and saving reports in PDF format.

3. Defect Tracking System

Hardware

IBM Security AppScan Source 9.0.3.12 requires the following hardware organized by operating system family.

Operating System Families

Windows

Windows

Hardware	Components	Requirement	Applicable operating systems
Disk Space	**Desktop** • AppScan Source Command Line Client • AppScan Source for Analysis • AppScan Source for Automation Client • AppScan Source for Development plug-in for Eclipse • AppScan Source for Development plug-in for IBM Rational Application Developer for WebSphere	Approximately 3 GB of available hard disk space, with 4 GB required for installation. Additional disk space may be required when scanning large applications. This includes additional space that may be required to accommodate files that are written to your AppScan Source data directory. To clear space in your AppScan Source data directory, locate its logs\ subdirectory and delete scanner_exceptions.log and scanner_exceptions.en.log (new versions of these files will be created again the next time you scan). If needed, you can also change your AppScan Source data directory by following the instructions in the 'Changing the AppScan Source data directory' topic in the product help or installation guide (see http://www.ibm.com/support/docview.wss?uid=swg21619340 to learn about AppScan Source documentation). Large applications that require long scan times can overflow your disk. If you receive an error message regarding storage or disk space, you may need to scan parts of your application separately or alter your scan configuration. Sample error message: Skipping project <project_name> due to error: Thread creation failure (<OS_error_message - for example: Not enough storage is available to process this command.>). Note: When the scan completes, original hard disk space will be returned. Before scanning this project again, you will need to allocate more space or change the configuration of your scan.	All supported Windows operating systems

Hardware	Components	Requirement	Applicable operating systems
	Software (RAD) • AppScan Source for Development plug-in for Visual Studio • IBM MobileFirst Platform Application Scanning **Server** • AppScan Source Database • AppScan Source for Automation Server		
Media (CD, DVD) Drives	**Desktop** • AppScan Source Command Line Client • AppScan Source for Analysis • AppScan Source for Automation Client • AppScan Source for Development plug-in for Eclipse • AppScan Source for Development plug-in for IBM Rational Application Developer for	CD-ROM or DVD-ROM drive	All supported Windows operating systems

Hardware	Components	Requirement	Applicable operating systems
	WebSphere Software (RAD) • AppScan Source for Development plug-in for Visual Studio • IBM MobileFirst Platform Application Scanning **Server** • AppScan Source Database • AppScan Source for Automation Server		
Memory	**Desktop** • AppScan Source Command Line Client • AppScan Source for Analysis • AppScan Source for Automation Client • AppScan Source for Development plug-in for Eclipse • AppScan Source for Development plug-in for IBM Rational Application	2 GB of RAM (minimum), 8GB of RAM or more recommended	All supported Windows operating systems

Hardware	Components	Requirement	Applicable operating systems
	Developer for WebSphere Software (RAD) • AppScan Source for Development plug-in for Visual Studio • IBM MobileFirst Platform Application Scanning **Server** • AppScan Source Database • AppScan Source for Automation Server		
Network: adapters, drivers, protocols	**Desktop** • AppScan Source for Development plug-in for Eclipse • AppScan Source for Development plug-in for IBM Rational Application Developer for WebSphere Software (RAD) • AppScan Source for Development plug-in for Visual Studio • IBM MobileFirst	If running in server mode, network connectivity to Security AppScan Enterprise Server. If using floating licenses, network connectivity to Rational License Key Server.	All supported Windows operating systems

Hardware	Components	Requirement	Applicable operating systems
	Platform Application Scanning		
	Desktop • AppScan Source Command Line Client • AppScan Source for Analysis • AppScan Source for Automation Client **Server** • AppScan Source Database • AppScan Source for Automation Server	Network connectivity to Security AppScan Enterprise Server. If using floating licenses, network connectivity to Rational License Key Server.	All supported Windows operating systems
Processor	**Desktop** • AppScan Source Command Line Client • AppScan Source for Analysis • AppScan Source for Automation Client • AppScan Source for Development plug-in for Eclipse • AppScan Source for	2 CPU	All supported Windows operating systems

Hardware	Components	Requirement	Applicable operating systems
	Development plug-in for IBM Rational Application Developer for WebSphere Software (RAD) • AppScan Source for Development plug-in for Visual Studio • IBM MobileFirst Platform Application Scanning **Server** • AppScan Source Database • AppScan Source for Automation Server		

Glossary

Bitness	Compatibility of the product with the bit version support that is provided by an operating system. Different parts of a product might run on the same operating system but support different application bitness. For example, one part of the product might run only in 32-bit mode, whereas another might support 64-bit tolerate mode.
	31: The product or part of the product runs as a 31-bit application in a 31-bit operating environment.
	32: The product or part of the product runs as a 32-bit application in a 32-bit operating environment.
	64-tolerate: The product or part of the product runs as a 32-bit application in a 64-bit operating environment.
	64-exploit: The product or part of the product runs natively as a 64-bit application in a 64-bit operating environment.
Co-packaged	Additional products that are included in the product package.
Co-installed	Additional products that are included in the product package and installed when the product is installed.
Deployment unit	**Deployment Structure** identifies pieces of a product that can be independently deployed onto one or more machines in a distributed infrastructure.

- The top level of the deployment structure consists of one or more deployment units. There are four possible deployment units that a product might support: Desktop, Server, Agent or client, Mobile.

- Deployment units may be further divided into deployable **components**

Desktop deployment unit: Part of the deployment structure intended for use by a single user, typically installed on the user desktops. Examples of desktop deployment units include development tools, administrative tools, stand-alone business applications.

Server deployment unit: Part of the deployment structure that can provide services to multiple clients, providing the server in a client-server architecture. Examples of server deployment units include application servers, management servers, database servers and server-based business applications.

Agent or client deployment unit: Part of the deployment structure that allows remote connection between software. Examples of agent of client deployment

units include agents in management system that are installed in the same tier as the managed resources, a remote application, or database clients that are installed with the software accessing the remote services.

Mobile deployment unit: Part of the deployment structure intended for use by a single user, typically installed on a mobile device. An example of a mobile deployment unit is a mobile application.

Hypervisor	A virtual machine in which a product can run on a guest operating system.
Limited operating system support	By default, the supported guest operating systems for a product and a hypervisor are the operating systems that are supported by both the product and the hypervisor. If a product restricts support to a subset of these operating systems, this restriction will be indicated by specifying that there is Limited Operating System Support.
Operating system minimum	The minimum operating system maintenance level that is required to run on the product.
Prerequisite minimum	The minimum maintenance level that is required for the prerequisite to work with the product.
Product minimum	The minimum maintenance level that is required for the product to run on the operating system, on an hypervisor, or work with a prerequisite product or supported software.
Supported software minimum	The minimum maintenance level that is required for the supported software to work with the product.
Long Term Support Release	A Long Term Support Release is a recommended product level for which support, including defect and security updates, will be provided over a specified period of time.
Continuous Delivery Product	A Continuous Delivery Product delivers new function to clients more frequently.
Continuous Delivery Product - Long Term Support Release	A Continuous Delivery Product delivers new function to clients more frequently. Since frequent releases may not be suitable for all client environments, Long Term Support Releases provide a package that will be supported for a longer period of time.
