## Included in this report

---

This report can be generated with filters applied to operating system platforms, components, and/or software capabilities. This section reflects how the report was filtered when it was generated.

### Legend

- The information about this item is included in this report.
  - The information about this item is not included in the report filter.
- 

### Platforms

- AIX
- HP
- Linux
- Mac OS
- Solaris
- Windows

### Component list

#### Server

- BigFix Console
- BigFix Server

#### Agent or client

- BigFix Agent
- BigFix Relay

### Capabilities

#### Prerequisites

- Databases

#### Related Software

- Databases
- Identity Management
- LDAP Servers
- Virtualization Management
- Web Browsers

# Operating Systems

The Operating systems section specifies the operating systems that BigFix Platform 9.2.19 supports, organized by operating system family.

## Operating system families

[AIX](#) [HP](#) [Linux](#) [Mac OS](#) [Solaris](#) [Windows](#)

### Component support

- Full
- Partial
- None

## AIX

### Summary

Operating system	Operating system minimum	Hardware	Bitness	Product minimum	Components  	Notes?
<a href="#">AIX 6.1</a>	TL4	POWER System - Big Endian	64-Exploit	9.2.6	<input type="radio"/> <input checked="" type="radio"/>	No
<a href="#">AIX 7.1</a>	Base	POWER System - Big Endian	64-Exploit	9.2.6	<input type="radio"/> <input checked="" type="radio"/>	No
<a href="#">AIX 7.2</a>	Base	POWER System - Big Endian	64-Exploit	9.2.6	<input type="radio"/> <input checked="" type="radio"/>	No

## AIX 6.1 POWER System - Big Endian

**Legend:** Supported Not supported

### Component

#### Server

BigFix Console

BigFix Server

#### Agent or client

BigFix Agent

BigFix Relay

### Product Support for the Operating System Technology Levels, Current and Future -->

Deployment unit	Component	Bitness	Base	TL1	TL2	TL3	TL4	TL5	TL6	TL7	TL8	TL9	...>
Agent or client	BigFix Agent	64-Exploit											
	BigFix Relay	64-Exploit											

## AIX 7.1 POWER System - Big Endian

**Legend:** Supported Not supported

### Component

#### Server

BigFix Console

BigFix Server

#### Agent or client

BigFix Agent

BigFix Relay

### Product Support for the Operating System Technology Levels, Current and Future [-->](#)

Deployment unit	Component	Bitness	Base	TL1	TL2	TL3	TL4	TL5	<a href="#">--&gt;</a>
Agent or client	BigFix Agent	64-Exploit							
	BigFix Relay	64-Exploit							

## AIX 7.2 POWER System - Big Endian

**Legend:** Supported Not supported

### Component

#### Server

BigFix Console

BigFix Server

#### Agent or client

BigFix Agent

BigFix Relay

### Product Support for the Operating System Technology Levels, Current and Future [-->](#)

Deployment unit	Component	Bitness	Base	TL1	TL2	TL3	<a href="#">--&gt;</a>
Agent or client	BigFix Agent	64-Exploit					
	BigFix Relay	64-Exploit					

## HP

### Summary

Operating system	Operating system minimum	Hardware	Bitness	Product minimum	Components	Notes?
HP-UX 11i v2	Base	IA64	64-Tolerate	9.2.6		Yes
HP-UX 11i v3	Base	IA64	64-Tolerate	9.2.6		No
HP-UX 11i v1	Base	PA-RISC	64-Tolerate	9.2.6		Yes
HP-UX 11i v2	Base	PA-RISC	64-Tolerate	9.2.6		Yes
HP-UX 11i v3	Base	PA-RISC	64-Tolerate	9.2.6		No

## HP-UX 11i v2 IA64

**Legend:** Supported Not supported

### Component

#### Server

BigFix Console

BigFix Server

#### Agent or client

BigFix Agent

BigFix Relay

### Product Support for the Operating System Technology Levels, Current and Future -->

## Windows Notes

1. Server Core installation option is supported.
2. This operating system is no longer in service. Please refer to IBM's policy on unsupported operating systems:  
<https://www.ibm.com/support/customer/care/sas/f/handbook/policies.html#unsupported>

# Hypervisors

The Hypervisors section specifies the hypervisors that BigFix Platform 9.2.19 support.

**Component support**

- Full
- Partial
- None

## Installable software

Operating System Families

[AIX](#)   [Linux](#)   [Solaris](#)   [Windows](#)

All IEM components are supported on virtual hardware. Any hypervisor technology specified in the IBM Virtualization Policy may be used as long as the guest OS is supported by the installed IEM component as indicated in the OS sections of this compatibility matrix. See Supported Software tab - Virtualization Management for supported Hypervisor Agents.

## AIX

### Summary

Hypervisor	Product minimum	Components  	Guest operating system restriction?	Notes?
<a href="#">WPAR: Product installed in System Workload Partition AIX 6.1</a>	9.2.6	<input type="radio"/> <input checked="" type="radio"/>	Yes	Yes

## Databases Notes

1. Ships with MS-SQL Express 2008 R2 for evaluation purposes. For Windows environments, Customer will provide full version of MS-SQL Server 2008, 2012, or 2014. For Linux environments, DB2 Workgroup Server Edition 10.5 is provided. Note: Ensure that the SQL collation of the database is not case sensitive.
2. Ships with MS-SQL Express 2005 for evaluation purposes. For Windows environments, Customer will provide full version of MS-SQL Server 2008 or 2012. For Linux environments, use the provided DB2 Workgroup Server Edition 10.5. Note: Ensure that the SQL collation of the database is not case sensitive.
3. If you installed DB2 10.5 from the BigFix installation package, then you are entitled to migrate to DB2 11.5 Standard Edition.

## Web Browsers Notes

1. Browser support applies to the WebReports capability of the product. Console and Client UI are not accessed via user browser.
2. Adobe Flash Player 12 or greater needs to be installed for Internet Explorer to use many dashboards and wizards in the BES Console. It is recommended that computers running the BES Console have the latest version of Adobe Flash Player installed for Internet Explorer. - For Windows Server 2012 or later, the "Desktop Experience" must be enabled. - For Windows 7 or Windows Server 2008, the Flash player must be updated using Flash Player fixlet in Updates for Windows Applications site, or directly using Adobe site. - For Windows 8 or later, or Windows Server 2012 or later, the Flash player is a part of Windows (as "Desktop Experience") and the Flash player must be updated using Flash player fixlet in Patches for Windows site, directly using Windows Update, or using update file from Microsoft download site.

# Hardware

BigFix Platform 9.2.19 requires the following hardware organized by operating system family.

## Operating System Families

[Linux](#)   [Windows](#)

### Linux

Hardware	Components	Requirement	Applicable operating systems
Disk Space	<b>Server</b> <ul style="list-style-type: none"> <li>BigFix Server</li> </ul>	<p>BigFix Server Hardware Specifications for both Windows and Linux Server configurations. The values listed below are recommended hardware specifications that will provide good performance for similar sized deployments of BigFix. If your deployment will have over 100 BigFix Console Operators you should consider raising your hardware specifications to the next higher scale to support the large number of users or contact IBM Technical Support for more help in selecting hardware. For best performance, use the following recommendations: Deployment Size CPU Hard Disks &lt; 1000 2-3 GHz - 2 Cores Standard HD 1,000 - 10,000 2-3 GHz - 2-4 Cores 1 RAID Array(RAID 10,5) 10,000 - 50,000 2-3 GHz -4 Cores 1-2 RAID Arrays (RAID 10) 50,000 - 100,000 2-3 GHz -4-8 Cores 2 RAID Arrays (RAID 10) 100,000 - 200,000 2-3 GHz - 8-16 Cores 2 RAID Arrays (RAID 10) &gt; 200,000 2-3+ GHz - 16 Cores 3 RAID Arrays (RAID 10) Note: RAID arrays must support using the disk cache for both reading and writing. The disk cache should be set to 50/50 read write. Disk Space Requirements The Hard Disk configurations listed above are focused on providing high performance disks for the database and BigFix Server. The physical capacity needed for BigFix is generally considered very small. A minimum of 10 GB free disk space is needed by the database, data files, and the file caches to run BigFix. It is recommended that an additional 40-60 GB of disk space be available for flexibility for administrative tasks like database backups and to allow for growth. Multiple RAID arrays normally provide more than enough disk space for BigFix so capacity concerns are not common.</p>	<ul style="list-style-type: none"> <li>Red Hat Enterprise Linux (RHEL) Server 6 6.10 x86-64</li> <li>Red Hat Enterprise Linux (RHEL) Server 6.3 x86-64</li> <li>Red Hat Enterprise Linux (RHEL) Server 6.4 x86-64</li> <li>Red Hat Enterprise Linux (RHEL) Server 6.5 x86-64</li> <li>Red Hat Enterprise Linux (RHEL) Server 6.6 x86-64</li> <li>Red Hat Enterprise Linux (RHEL) Server 6.7 x86-64</li> <li>Red Hat Enterprise Linux (RHEL) Server 6.8 x86-64</li> </ul>

Other Hardware	<b>Server</b> <ul style="list-style-type: none"> <li>• BigFix Server</li> </ul>	<p>The following table describes additional capacity planning requirements based on enablement of specific BigFix function, broken down by platform where necessary. Notes on the specific functions are provided. Function Enabled Platform Additional CPU Additional Memory (GB) Message Level Encryption All +2 +4 BigFix WebUI ETL All +1 +4 BigFix WebUI Windows +6/10</p>	<ul style="list-style-type: none"> <li>• Red Hat Enterprise Linux (RHEL) Server 6 6.10 x86-64</li> </ul>

Hardware	Components	Requirement	Applicable operating systems
		<p>Concurrent Users +4/10 Concurrent Users BigFix WebUI Linux +3/10 Concurrent Users +2/10 Concurrent Users •Message Level Encryption (MLE) provides data encryption support for clients, and is particularly valuable for insecure networks or when secure communication in general is required. It is worth noting MLE does not affect actions taken from the console or fixlets that are already protected by digital signatures. More information on MLE is provided in the References section. •The BigFix WebUI offers a new scalable and highly responsive management interface for BigFix. As part of the implementation, an Extract-Transform-Load (ETL) infrastructure must be enabled. This function, once enabled, has the above server requirements. •The BigFix WebUI in general, once enabled, will drive additional system utilization as a function of the number of concurrent administrators (as described earlier, this is the population of administrators active at any one time, and the number of concurrent administrators is typically &gt;&gt; the total number of administrators).In terms of the scalability characteristics of the WebUI, the initial release is targeted at the activities of non-master operators (versus the broader administrative role of master operators). A realistic upper bound for the initial release of the WebUI would be management by 30 concurrent users on Windows, and 60 concurrent users on Linux, over an estate of 60k devices. The concurrent users would typically be non-master operators, managing a subset of the estate. For example, some non-master operators may only be managing a handful of devices, while others may be managing on the order of 20k devices. It is possible to manage at a larger scale based on user operations, infrastructure capability, etc. However, the stated bounds should be considered a good “rule of thumb” for the scale of the solution.</p>	<ul style="list-style-type: none"> <li>• Red Hat Enterprise Linux (RHEL) Server 6.3 x86-64</li> <li>• Red Hat Enterprise Linux (RHEL) Server 6.4 x86-64</li> <li>• Red Hat Enterprise Linux (RHEL) Server 6.5 x86-64</li> <li>• Red Hat Enterprise Linux (RHEL) Server 6.6 x86-64</li> <li>• Red Hat Enterprise Linux (RHEL) Server 6.7 x86-64</li> <li>• Red Hat Enterprise Linux (RHEL) Server 6.8 x86-64</li> <li>• Red Hat Enterprise Linux (RHEL) Server 6.9 x86-64</li> <li>• Red Hat Enterprise Linux (RHEL) Server 7 7.7 x86-64</li> <li>• Red Hat Enterprise Linux (RHEL) Server 7 x86-64</li> <li>• Red Hat Enterprise Linux (RHEL) Server 7.1 x86-64</li> <li>• Red Hat Enterprise Linux (RHEL) Server 7.2 x86-64</li> <li>• Red Hat Enterprise Linux (RHEL) Server 7.3 x86-64</li> <li>• Red Hat Enterprise Linux (RHEL) Server 7.4 x86-64</li> <li>• Red Hat Enterprise Linux (RHEL) Server 7.5 x86-64</li> </ul>

	<p><b>Server</b></p> <ul style="list-style-type: none"> <li>• BigFix Server</li> </ul>	<p>The following table describes additional capacity planning requirements based on enablement of specific BigFix function, broken down by platform where necessary. Notes on the specific functions are provided. Function Enabled Platform Additional CPU Additional Memory (GB) Message Level Encryption All +2 +4 BigFix WebUI ETL All +1 +4 BigFix WebUI Windows +6/10 Concurrent Users +4/10 Concurrent Users BigFix WebUI Linux +3/10 Concurrent Users +2/10 Concurrent Users •Message Level Encryption (MLE) provides data encryption support for clients, and is particularly valuable for insecure networks or when secure communication in general is required. It is worth noting MLE does not affect actions taken from the console or fixlets that are already protected by digital signatures. More information on MLE is provided in the References section. •The BigFix WebUI offers a new scalable and highly responsive management interface for BigFix. As part of the implementation, an Extract-Transform-Load (ETL) infrastructure must be enabled. This function, once enabled, has the above server requirements. •The BigFix WebUI in general, once enabled, will drive additional system utilization as a function of the number of concurrent administrators (as described earlier, this is the population of administrators active at any one time, and the number of concurrent administrators is typically &gt;&gt; the total number of administrators).In terms of the scalability characteristics of the WebUI, the initial release is targeted at the activities of non-master operators (versus the broader administrative role of master operators). A realistic upper bound for the initial release of the WebUI would be management by 30 concurrent users on Windows, and 60 concurrent users on Linux, over an estate of 60k devices. The concurrent users would typically be non-master operators, managing a subset of the estate. For example, some non-master operators may only be managing a handful of devices, while others may be managing on the order of 20k devices. It is possible to manage at a larger scale based on user operations, infrastructure capability, etc. However,</p>	<ul style="list-style-type: none"> <li>• Windows Server 2008 R2 Datacenter Edition x86-64</li> <li>• Windows Server 2008 R2 Enterprise Edition x86-64</li> <li>• Windows Server 2008 R2 Service Pack 1 Datacenter Edition x86-64</li> <li>• Windows Server 2008 R2 Service Pack 1 Enterprise Edition x86-64</li> <li>• Windows Server 2008 R2 Service Pack 1 Standard Edition x86-64</li> <li>• Windows Server 2008 R2 Standard Edition x86-64</li> <li>• Windows Server 2008 SP2 Datacenter Edition x86-64</li> <li>• Windows Server 2008 SP2</li> </ul>

# Glossary

---

**Bitness**

Compatibility of the product with the bit version support that is provided by an operating system. Different parts of a product might run on the same operating system but support different application bitness. For example, one part of the product might run only in 32-bit mode, whereas another might support 64-bit tolerate mode.

**31:** The product or part of the product runs as a 31-bit application in a 31-bit operating environment.

**32:** The product or part of the product runs as a 32-bit application in a 32-bit operating environment.

**64-tolerate:** The product or part of the product runs as a 32-bit application in a 64-bit operating environment.

**64-exploit:** The product or part of the product runs natively as a 64-bit application in a 64-bit operating environment.

---

**Co-packaged**

Additional products that are included in the product package.

---

**Co-installed**

Additional products that are included in the product package and installed when the product is installed.

---

**Deployment unit**

**Deployment Structure** identifies pieces of a product that can be independently deployed onto one or more machines in a distributed infrastructure.

- The top level of the deployment structure consists of one or more deployment units. There are four possible deployment units that a product might support: Desktop, Server, Agent or client, Mobile.
- Deployment units may be further divided into deployable **components**

**Desktop** deployment unit: Part of the deployment structure intended for use by a single user, typically installed on the user desktops. Examples of desktop deployment units include development tools, administrative tools, stand-alone business applications.

**Server** deployment unit: Part of the deployment structure that can provide services to multiple clients, providing the server in a client-server architecture. Examples of server deployment units include application servers, management servers, database servers and server-based business applications.

**Agent or client** deployment unit: Part of the deployment structure that allows remote connection between software. Examples of agent or client deployment

units include agents in management system that are installed in the same tier as the managed resources, a remote application, or database clients that are installed with the software accessing the remote services.

**Mobile** deployment unit: Part of the deployment structure intended for use by a single user, typically installed on a mobile device. An example of a mobile deployment unit is a mobile application.

<b>Hypervisor</b>	A virtual machine in which a product can run on a guest operating system.
<b>Limited operating system support</b>	By default, the supported guest operating systems for a product and a hypervisor are the operating systems that are supported by both the product and the hypervisor. If a product restricts support to a subset of these operating systems, this restriction will be indicated by specifying that there is Limited Operating System Support.
<b>Operating system minimum</b>	The minimum operating system maintenance level that is required to run on the product.
<b>Prerequisite minimum</b>	The minimum maintenance level that is required for the prerequisite to work with the product.
<b>Product minimum</b>	The minimum maintenance level that is required for the product to run on the operating system, on an hypervisor, or work with a prerequisite product or supported software.
<b>Supported software minimum</b>	The minimum maintenance level that is required for the supported software to work with the product.
<b>Long Term Support Release</b>	A Long Term Support Release is a recommended product level for which support, including defect and security updates, will be provided over a specified period of time.
<b>Continuous Delivery Product</b>	A Continuous Delivery Product delivers new function to clients more frequently.
<b>Continuous Delivery Product - Long Term Support Release</b>	A Continuous Delivery Product delivers new function to clients more frequently. Since frequent releases may not be suitable for all client environments, Long Term Support Releases provide a package that will be supported for a longer period of time.
