# 1 Preface

This section provides information about the KRS Guide and includes the following topics.

- [Intended Audience](#)
- [About This Guide](#)
- [Related Documents](#)
- [Conventions](#)

## 1.1 Intended Audience

This information is intended for administrators responsible for configuring automate.

## 1.2 About this Guide

This guide provides information regarding KRS in which users can change root user password for different authentication types and rotate encryption key after KRS login.

## 1.3 Related Documents

The following documents can be referenced in addition to this guide for further information on the automate platform.

- iAutomate Installation Guide
- iAutomate Introduction Guide
- iAutomate Troubleshooting Guide

## 1.4 Conventions

The following typographic conventions are used in this document:

Table 1 - Conventions

Convention	Element
<b>Boldface</b>	Indicates graphical user interface elements associated with an action, or terms defined in text or the glossary
<u>Underlined blue</u>	Indicates cross-reference and links
<i>Italic</i>	Indicates document titles, occasional emphasis, or glossary terms
Courier New (Font)	Indicates commands within a paragraph, URLs, code in examples, and paths including onscreen text and text input from users
Numbered lists	Indicates steps in a procedure to be followed in a sequence
Bulleted lists	Indicates a list of items that is not necessarily meant to be followed in a sequence

## 2 iAutomate

### 2.1 Introduction

This document provides all the changes the user can perform post login in KRS service.

The Below operations can be performed by the user in different ways: -

1. KRS Service Login
2. Change Root Authentication Type/Super Admin to login with Form Based or LDAP or SAML. and generate new passwords for root user when user authentication type is Form based.
3. Rotate Encryption Key

No changes are required in installers, root user created by the installer will be having the authentication type as Form Based by default.

### 2.2 UI and component changes

#### 2.2.1 Login in KRS Service

If you are logging into KRS web application for the first time, to perform configuration, the user must have login credentials for application service account.

1. Launch a web browser and enter KRS web application URL.
2. On the login page, the KRS Login Page appears.
3. Select Domain account or Local Administrator from the dropdown.
4. Enter "Domain/Local" account through which KRS site is hosted.

If user selects 'Local Administrator' from dropdown, enter "."\" in the Domain field.

5. Enter Username and Password for the account from which KRS site is hosted.

Figure 2 – Change Super Admin Authentication Type

User can change the Authentication Type in following ways:

#### From Based Authentication Type:

1. Select Form Based on dropdown of Authentication Type.
2. Enter Root Email (account) for which the user wants to generate new passwords.
3. Add License Key, key which is used while KRS configuration for root/Super Admin login.
4. Select checkbox Agree to Terms if user agrees to the terms.

5. Click on the button Generate New Password to generate a new password for the account.

#### LDAP Authentication Type:

The screenshot shows the 'Configure Super Admin' form with the 'Authentication Type' dropdown set to 'LDAP'. The form includes fields for 'Email', 'LDAP URL', 'LDAP/Domain Password', 'LDAP/Domain User Name', 'License Key', and an 'Is SSL Required' checkbox. There is also an 'Agree to Terms' checkbox and an 'Update' button at the bottom.

Figure 3 – LDAP Authentication Type

1. Select LDAP on dropdown of Authentication Type.
2. Enter AD Email (HCL account) to which user must give root/super admin privileges.
3. Enter LDAP URL.
4. Enter LDAP/Domain Username.
5. Check 'Is SSL Required', if required.
6. Add License Key, key which is used while KRS configuration for root/super admin login.
7. Select checkbox Agree to Terms if user agrees to the terms.

#### SAML Authentication Type:

The screenshot shows the 'Configure Super Admin' form with the 'Authentication Type' dropdown set to 'SAML'. The form includes fields for 'Email', 'Id', 'Name Id', 'Logout URL', 'URL', 'Tool', 'License Key', and an 'Agree to Terms' checkbox. There is also an 'Update' button at the bottom.

Figure 4 – SAML Authentication Type

1. Select SAML on dropdown of Authentication Type.
2. Enter Email.
3. Enter ID.

4. Enter URL
5. Enter Name Id.
6. Enter Tool
7. Enter Logout URL.
8. Add License Key, key which is used while KRS configuration for root/superadmin login.
9. Select checkbox Agree to Terms if user agrees to the terms.
10. On clicking the Update button, license key will be validated.

### 2.2.3 Rotate Encryption Key

This page is used to rotate encryption keys.

1. Select Rotate Encryption Key tab from the menu bar.
2. Enter the License key and click Rotate Encryption Key button.

Figure 5 – Encryption Key Rotation

### 2.2.4 Configure Whitesource URL

This following page is used for whitelisting source URLs. Click Configure Whitelist URL tab from the menu bar. Now click Add new record to add a new URL to the list. Click the Edit button to modify any existing URLs. If you want to remove a URL completely, click the Delete button.
