HCL iObserve – Release Notes V2024.4

Table of Contents

1. *New Features and Improvements:*..... 1

1. New Features and Improvements:

1.1. Intelligent Map improvements

- Support for bendy multi-point links between objects on the map.
- Bulk-clone maps in the user interfaces or via SDK.
- Support for background images loaded from an external URL.

1.2. Modern Dashboard improvements

- Dashboard tabs: You can create a tabbed dashboard experience within Modern Dashboards.
- Global filters icon: You can filter out content of a dashboard to view relevant data without the need for heavy customization.
- Breadcrumbs: When navigating to certain Modern Dashboard Details pages, use breadcrumbs to easily navigate back to the previous Modern Dashboard Summary page.
- Locked header: Modern Dashboards can now have a locked header when you scroll down. This allows the title, tabs, and other items to remain on top of the page for easier navigation.
- Custom home page: You can set a Modern Dashboard as the default Home Page View and default Summary View for users or groups. Users can thus be directed to a Modern Dashboard automatically when they log in to Web Console.

1.3. General improvements

- Scalability and performance improvements, such as improved polling stability and decreased CPU load by polling services.
- Stability improvements for Platform Agents.
- Security and compliance improvements.

1.4. Other improvements

- You can now see the full Windows Build version when monitoring Windows via WMI or Platform Agent. This was previously only available with Asset Inventory enabled.
