

HCLSoftware

HCL Workload Automation Database Views Version 10.2.6

Note

Before using this information and the product it supports, read the information in [Notices on page cxxiv](#).

This edition applies to version 10, release 2, modification level 6 of HCL Workload Automation (program number 5698-T09) and to all subsequent releases and modifications until otherwise indicated in new editions.

About this publication

HCL Workload Automation *Database Views* describes a set of views created by running queries on a specific set of tables in the HCL Workload Automation database and displays the information obtained in tabular form. You can use reporting tools, such as Crystal Reports or Brio, to define reports based on the information obtained.

What is new in this release

Learn what is new in this release.

For information about the new or changed functions in this release, see *Overview*, section *Summary of enhancements*.

New or changed content is marked with revision bars.

Chapter 1. Overview

HCL Workload Automation Database Views describes a set of predefined views provided with HCL Workload Automation in tabular form. A view is a logical table containing the data generated by a query. A view is based on an underlying set of base tables, and the data shown in a view is determined by a SELECT statement that is run on these base tables. See [Displaying a view on page 9](#) for a detailed explanation about how to display a view. Views are described in alphabetic order. Each table shows the names of the columns in the view, a description of each column, and its data type.

This chapter is divided into the following sections:

- [Key to using the table views on page 6](#)
- [View names on page 7](#)
- [Displaying a view on page 9](#)

Key to using the table views

Each view is described in a table containing the following columns:

column

The name of the column in the view.

description

The description of the column in the view.

type

The data type of the column in the view. Possible values are:

Character

A single character, typically a flag.

String

A sequence of characters.

Integer

A numeric value, indicating a quantity.

Timestamp

A value designating a date and time. The format depends on the language set for the workstation and on the database you are using.

Date

A three-part value consisting of a day, month, and year. The format depends on the language set for the workstation and on the database you are using. For example, if the language set for the workstation is Italian and the database you are using is DB2®, the date format is dd/mm/yyyy.

View names

The name of the view has the following structure:

```
database_schema_name.object_name_V
```

where:

database_schema_name

Depends on the database you are using. It can assume one of the following values:

If you are using a DB2® database:

EVT

Identifies views containing information about event management object definitions.

LOG

Identifies views containing information about event management objects already run.

MDL

Identifies views containing information about the HCL Workload Automation object except event management objects.

PLN

Identifies views containing information about HCL Workload Automation objects in the plan

If you are using an Oracle database:

The name of the HCL Workload Automation Oracle user you defined during the installation.

object_name

Represents the name of the object for which you are displaying the information.

For example, if you want to display view information about job history from a DB2® database, the name of the view is:

```
MDL.JOB_HISTORY_V
```

If you want to display view information about job history from an Oracle database and the name of the HCL Workload Automation Oracle user you defined during the installation is **tw**, the name of the view is:

```
tw.JOB_HISTORY_V
```

[Table 1: Views available with HCL Workload Automation on page 7](#) lists the views you can use with HCL Workload Automation.

Table 1. Views available with HCL Workload Automation

View name	Information obtained
ACTION_PARAMETERS_V on page 14	Displays information about the parameters associated with the actions run.

Table 1. Views available with HCL Workload Automation (continued)

View name	Information obtained
ACTION_RUNS_V on page 14	Displays the actions run for each event rule.
CALENDARS_V on page 19	Displays information about calendars.
EVENT_CONDITIONS_V on page 20	Displays information about the events associated with each rule.
EVENT_RULE_INSTANCES_V on page 22	Displays information about run event rule history.
EVENT_RULES_V on page 23	Displays information about the event rules.
EVENT_RULE_ACTIONS_V on page 20	Displays information about the actions associated with each event rule.
FILE_REFS_V on page 26	Displays information about jobs and job streams that depend on a file.
INTERNETWORK_DEPS_V on page 29	Displays information about jobs and job streams that depend on an internetwork dependency.
JOB_DEFINITION_REFS_V on page 32	Displays information about the job streams in which a job appears.
JOB_DEPS_V on page 34	Displays information about jobs and job streams that depend on a job.
JOB_HISTORY_V on page 40	Displays information about job history.
JOB_STATISTICS_V on page 45	Displays information about jobs.
JOB_STREAM_DEPS_V on page 48	Displays information about jobs and job streams that depend on a job stream.
JOB_STREAM_REFS_V on page 55	Displays information about job streams.
LOG_MESSAGES_V on page 57	Displays information about the messages logged by log actions.
PLAN_DOMAINS_V on page 58	Displays information about domains in the plan.
PLAN_FILE_REFS_V on page 59	Displays information about jobs and job streams in the plan that depend on a file.
PLAN_FILES_V on page 62	Displays information about files in the plan.
PLAN_JOB_PREDECESSORS_V on page 62	Displays information about jobs and job streams predecessors of a job in the plan.
PLAN_JOB_STREAM_PREDECESSORS_V on page 67	Displays information about jobs and job streams predecessors of a job stream in the plan.
PLAN_JOB_STREAM_SUCCESSORS_V on page 72	Displays information about jobs and job streams successors of a job stream in the plan.

Table 1. Views available with HCL Workload Automation (continued)

View name	Information obtained
PLAN_JOB_SUCCESSORS_V on page 76	Displays information about jobs and job streams successors of a job in the plan.
PLAN_JOB_STREAMS_V on page 80	Displays information about job streams in the plan.
PLAN_JOBS_V on page 86	Displays information about jobs in the plan.
PLAN_PROMPT_REFS_V on page 93	Displays information about jobs and job streams in plan that depend on a prompt.
PLAN_PROMPTS_V on page 96	Displays information about prompts in the plan.
PLAN_RESOURCE_REFS_V on page 97	Displays information about jobs and job streams in plan that depend on a resource.
PLAN_RESOURCES_V on page 100	Displays information about resources in the plan.
PLAN_WORKSTATIONS_V on page 101	Displays information about workstations in the plan.
PROMPTS_V on page 105	Displays information about prompts, such as their name and definition.
PROMPT_REFS_V on page 105	Displays information about jobs and job streams that depend on a prompt.
PROPERTIES_V on page 108	Displays information about global options and properties.
REMOTE_JOB_REQUESTS_V on page 108	Displays the details of the request to bind to a job on a remote engine.
RESOURCES_V on page 110	Displays information about resources.
RESOURCE_REFS_V on page 111	Displays information about jobs and job streams that depend on a resource.
RUN_CYCLE_REFS_V on page 115	Displays information about when job streams run.
VARIABLES_V on page 120	Displays information about global parameters, from now on called variables.
VARIABLE_TABLE_REFS_V on page 121	Displays information about job streams, run cycles, and workstations that use variable tables.

Displaying a view

This section contains information about:

- [Granting access to users for displaying views on page 10](#)
- [Displaying a view from a DB2 database on page 10](#)
- [Displaying a view from an Oracle schema on page 11](#)

Granting access to users for displaying views

For the procedure that describes how to grant access to users for displaying views, see the *Administration Guide*, section, "Configuring Dynamic Workload Console to view reports". This procedure applies also to views.

Displaying a view from a DB2® database

About this task

This section describes how to display a view from a DB2® database using the Command Editor. You can also use the DB2® command line to display a view. Based on the operating system, use one of the following procedures:

- [Displaying a view on a Windows workstation with a DB2 database on page 10](#)
- [Displaying a view on a UNIX workstation with a DB2 database on page 11](#)

Displaying a view on a Windows™ workstation with a DB2® database

To display a view on a Windows™ workstation with a DB2® database installed, perform the following steps:

1. Select **Start** → **Programs** → **IBM® DB2®** → **Command Line Tools** → **Command Editor**. The Command Editor main window opens.
2. In the **Command** page, enter the following command:

```
connect to databasename_db user username
```

where *databasename_db* is the name of the database you want to connect to. The default is **tw**.

user name is the name of the user with which you installed the DB2® database. The default is **db2admin**.

3. Click the green arrow in the upper-left corner of the Command Editor window. The Enter Credentials dialog displays.
4. In the **password** field, type the user password and click **OK**. The Command Editor window shows the database connection information. The Query Results tab displays.
5. From the Command Editor main window, enter the following command:

```
select * from view_name
```

where *view_name* is the name of the view from which you want to display the information.

For example, to extract information from the MDL.JOB_HISTORY_V view, enter the following command:

```
select * from MDL.JOB_HISTORY_V
```

6. Click the green arrow in the upper-left corner of the Command Editor window. The Query Results dialog displays the results of the query.

Displaying a view on a UNIX™ workstation with a DB2® database

To display a view on a UNIX™ workstation with a DB2® database installed, perform the following steps:

1. From a shell script, enter the following command:

```
su - DB2user
```

where *DB2user* is the name of the user with which you installed the DB2® database. The default name is **db2inst1**. For example, if you installed the DB2® database using the **db2inst1** user name, enter the following command:

```
su - db2inst1
```

2. Ensure that the DB2® environment is initialized using the following command:

```
db2
```

3. Type

```
quit
```

to return to the shell environment.

4. Start the Command Editor using the following command:

```
db2
```

5. Proceed as described from Step 2 of [Displaying a view on a Windows workstation with a DB2 database on page 10](#).

Displaying a view from an Oracle schema

About this task

This section describes how to display a view from an Oracle schema using the Oracle Enterprise Manager. You can also use the Oracle command line to display a view. Based on the operating system and on the Oracle release you are working with, use one of the following procedures:

- [Displaying a view on a Windows workstation with an Oracle 11g schema on page 11](#)
- [Displaying a view on a UNIX workstation with an Oracle 11g schema on page 12](#)

Displaying a view on a Windows™ workstation with an Oracle 11g schema

To display a view on a Windows™ workstation with an Oracle 11g schema installed, perform the following steps:

1. Verify that the Oracle Enterprise Manager Console is accessible from a client browser. This implies that the *dbconsole* process is running on the server. This process starts automatically after the installation. To verify that the *dbconsole* process is running, and start it if it is not running, perform the following steps:
 - a. Select **Start** → **Settings** → **Control Panel** → **Administrative Tools** → **Services**. The Services (Local) window opens.
 - b. Locate the OracleDBConsole*ORACLE_SID* service, where *ORACLE_SID* is the name of the Oracle database created on the workstation. The **Status** column shows the status of the service.

If the Status column is Started:

The *dbconsole* process is running on the server.

If the Status column is blank, the process is stopped. To start it, perform the following steps:

- i. Double-click the **OracleDBConsoleORACLE_SID** service row. The OracleDBConsoleORACLE_SID Properties (Local Computer) dialog displays.
 - ii. In the General page, ensure that the **Startup type** is either **Automatic** or **Manual**.
 - iii. In the Service status group, click **Start**.
2. Select **Start** → **Programs** → **Oracle-installation_name** → **DatabaseControl- database_name**. The Oracle Enterprise Manager 11g Login to Database *database_name* web page displays.
 3. Type the following information and click **Login**:

Username

It can be:

Oracle administrator user

The database administrator user name, for example *SYSTEM*, required to authenticate to the Oracle database.

HCL Workload Automation user

The owner of the HCL Workload Automation schema.

Password

The password associated with the user specified in the **Username** field.

The Database Instance: *database_name* home page displays.

4. In Related Links, select **SQL Worksheet**. The SQL Worksheet: *database_instance_name* web page displays.
5. In the **Enter SQL commands** input area, enter the following command:

```
select * from view_name
```

where *view_name* is the name of the view from which you want to display the information. The view name has the following format:

```
username.JOB_HISTORY_V
```

where *username* is the name of the owner of the HCL Workload Automation schema. For example, if the user name is **TWSuser**, to extract information from the *username.JOB_HISTORY_V* view, enter the following command:

```
select * from TWSuser.JOB_HISTORY_V
```

6. Click **Execute**. The output area displays the results of the query.

Displaying a view on a UNIX™ workstation with an Oracle 11g schema

To display a view on a UNIX™ workstation with an Oracle 11g schema installed, perform the following steps:

1. Switch to the Oracle user who owns the Oracle installation, by running the following command:

```
su - oracle_user
```

For example, if the *oracle_user* is *oracle*, enter the following command:

```
su - oracle
```

2. Verify that the Oracle Enterprise Manager Console is accessible from a client browser. This implies that the *dbconsole* process is running on the server. This process starts automatically after the installation. To verify that it is running, run the following command from the *\$ORACLE_HOME/bin* directory:

```
./emctl status dbconsole
```

If the *dbconsole* process is stopped, start it by running the following command from the *\$ORACLE_HOME/bin* directory:

```
./emctl start dbconsole
```

3. Connect to the following website:

```
https://hostname:port/em
```

where:

hostname

Specify the name of the host you are working with.

port

Specify the port to use for communicating. The default port number is:

5500

For Oracle Standard Edition.

1158

For Oracle Enterprise Edition.

To verify the port used for communicating, open the *oracle_home/install/portlist.ini* file and look for the port number specified in the **Enterprise Manager Console HTTP port(instance_name)=port_number** line.

4. Launch the Oracle Enterprise Manager and proceed as described from Step 3 of the [Displaying a view on a Windows workstation with an Oracle 11g schema on page 11](#).

Chapter 2. HCL Workload Automation views

This chapter describes the views you can use to extract information from the HCL Workload Automation database. You can then use reporting tools, such as Crystal Reports or Brio, to define reports based on this information. It also contains examples of the most significant views.

In the following sections the views are listed in alphabetic order.

ACTION_PARAMETERS_V

The ACTION_PARAMETERS_V view displays information about the parameters associated with the actions run.

Table 2. The ACTION_PARAMETERS_V view

Column name	Description	Type	Length
Log_time	The time when the action run was logged.	timestamp	26 In DB2® 35 In Oracle
Event_rule_name	The name of the event rule associated with the action.	string	40
Action_provider	The name of the plug-in associated with the action.	string	40
Action_scope	The scope of the action. That is the most meaningful information related to the action. The plug-in defines the information to be inserted.	string	120
Action_type	The type of action.	string	40
Parameter_name	The name of the parameter associated with the action.	string	50
Parameter_value	The value of the parameter.	string	256

ACTION_RUNS_V

The ACTION_RUNS_V view displays the actions run for each event rule.

Table 3. The ACTION_RUNS_V view

Column name	Description	Type	Length
Log_time	The time when the action run was logged.	timestamp	26 In DB2®

Table 3. The ACTION_RUNS_V view (continued)

Column name	Description	Type	Length
			35
			In Oracle
Event_rule_name	The name of the event rule associated with the action.	string	40
Event_rule_type	The type of event rule. Possible values are: F Filter Q Sequence S Set	character	1
Action_provider	The name of the plug-in associated with the action.	string	40
Action_scope	The scope of the action. That is the most meaningful information related to the action. The plug-in defines the information to be inserted.	string	120
Action_type	The type of action.	string	40
Action_status	The status of the actions run. Possible values are: S Successful W Warning E Error	character	1
Action_result	The result of the action. It depends on the plug-in associated with the action.	string	128
Message	The text of the message that is logged by the action plug-in when the action is run. It provides information about how the action completed.	string	512

AUDIT_STORE_RECORDS_V

The AUDIT_STORE_RECORDS_V view displays information about the auditing records stored in the database.

Table 4. The AUDIT_STORE_RECORDS_V view

Column name	Description	Type	Length
Log_time	The date and time the log was created.	Timestamp	10
Log_type	An eight character value indicating the source of the log record. This value is for internal use only.	Character	1
Object_type	The type of the object that was affected by an action.	Varchar	128
Action_type	The type of action was performed on the object.	Varchar	128
User_name	The logon user who performed the particular action.	Varchar	128
Object_key	The fully qualified name of the object.	Varchar	128
Object_name	The name of the object.	Varchar	128
Workstation_name	The name of the workstation of the object	Varchar	128
Justification_category	The justification category of the object	Varchar	128
Justification_ticket_num	The ticket number of the object specified in the justification information.	Varchar	128
Justification_description	The description of the object specified in the justification information.	Varchar	512
Object_definition_differences	The differences between two versions of the same object definition	Varchar	4095
Related_workstation_name	The workstation name of the object which is related to the audited object	Varchar	128

Table 4. The AUDIT_STORE_RECORDS_V view (continued)

Column name	Description	Type	Length
Related_object_name	The name of the object which is related to the audited object	Varchar	128
Object_definition	The definition of the scheduling object.	Clob	1048576
Object_identifier	The identifier of the audited object.	Character	16
Log_id	The identifier of the log record.	Decimal	20

Output example

Table 5: AUDIT_STORE_RECORDS_V view output example on page 17 shows an example of the output for the AUDIT_STORE_RECORDS_V view.

EVENT_CONDITIONS_V

The EVENT_CONDITIONS_V view displays information about the events associated with each event rule.

Table 8. The EVENT_CONDITIONS_V view

Column name	Description	Type	Length
Event_rule_name	The name of the event rule.	string	40
Event_name	The name of the event associated with the event rule.	string	50
Event_provider	The name of the plug-in associated with the event.	string	40
Event_type	The type of event.	string	40
Event_scope	The scope of the event. That is the most meaningful information related to the event. The plug-in defines the information to be inserted.	string	120
Filtering_predicate	The content in XML format of the filteringPredicate keyword in the event rule definition file.	string	not defined
Event_rule_folder_id	The identifier of the folder where the event rule is stored.	character	16
Event_rule_folder_name	The name of the folder where the event rule is stored.	string	801

EVENT_RULE_ACTIONS_V

The EVENT_RULE_ACTIONS_V view displays information about actions associated with each event rule.

Table 9. The EVENT_RULE_ACTIONS_V view

Column name	Description	Type	Length
Event_rule_identifier	The identifier of the event rule.	character	40
Event_rule_folder_id	The identifier of the folder where the event rule is stored.	character	16
Event_rule_folder_name	The name of the folder where the event rule is stored.	string	801
Event_rule_name	The name of the event rule.	string	40
Action_identifier	The identifier of the action associated with the event rule.	character	120
Action_description	The description of the action associated with the event rule.	string	120

Table 9. The EVENT_RULE_ACTIONS_V view (continued)

Column name	Description	Type	Length
Action_provider	The name of the plug-in associated with the action.	string	40
Action_type	The type of action associated with the event rule.	string	40
Response_type	When the action must be run. Possible values are: D onDetection. The action starts when the event rule is run. The event rule is run according to its rule type. This might be on detection of a single event or when all the events of a set or sequence are captured. T onTimeOut. The action starts when the first event of a set or sequence is captured, but the set or sequence of events does not complete in the time interval defined in the timeInterval keyword.	character	1
Action_scope	The scope of the action. That is the most meaningful information related to the action. The plug-in defines the information to be inserted.	string	120
Parameter_list	A comma separated list of parameters associated with the action and their value. The list is in the format <i>parameter name=value</i> .	string	not defined
Job_wks_identifier	The identifier of the workstation where the job specified in the Job_identifier column is defined.	character	16
Job_wks_name	The name of the workstation where the job specified in the Job_name column is defined.	string	16
Job_identifier	The identifier of the job submitted by the action.	character	16
Job_name	The name of the job submitted by the action.	string	40
Job_stream_wks_identifier	The identifier of the workstation where the job stream is defined.	character	16
Job_stream_wks_name	The name of the workstation where the job stream is defined.	string	16
Job_stream_folder_id	The identifier of the folder that contains the job stream submitted by the action.	character	16

Table 9. The EVENT_RULE_ACTIONS_V view (continued)

Column name	Description	Type	Length
Job_stream_folder_name	The name of the folder that contains the job stream submitted by the action.	string	4000 Oracle 4095 DB2
Job_stream_identifier	The identifier of the job stream submitted by the action.	character	16
Job_stream_name	The name of the job stream submitted by the action.	string	16
Variable_table_identifier	The identifier of the variable table of the job stream submitted by the action.	character	16
Variable_table	The name of the variable table of the job stream submitted by the action.	string	80
Variable_table_folder_id	The identifier of the folder where the variable table is stored.	character	16
Variable_table_folder_name	The name of the folder where the variable table is stored.	string	801

EVENT_RULE_INSTANCES_V

The EVENT_RULE_INSTANCES_V view displays information about run event rule history.

Table 10. The EVENT_RULE_INSTANCES_V view

Column name	Description	Type	Length
Log_time	The time when the event rule instance was logged.	timestamp	26 In D B2® 35 In Or a cle
Event_rule_name	The name of the event rule.	string	40
Event_rule_type	The type of event rule. Possible values are: F Filter	character	1

Table 10. The EVENT_RULE_INSTANCES_V view (continued)

Column name	Description	Type	Length
	Q Sequence		
	S Set		
Event_rule_instance_status	The status of the event rule. Possible values are:	character	1
	S Successful		
	R Running		
	E Error		
	W Warning		
Is_timeout_expired	If the timeout associated with event rule is expired. Possible values are:	character	1
	Y Yes		
	N No		

EVENT_RULES_V

The EVENT_RULES_V view displays information about event rules.

Table 11. The EVENT_RULES_V view

Column name	Description	Type	Length
Event_rule_name	The name of the event rule.	string	40
Event_rule_description	The description of the event rule.	string	120
Event_rule_type	The type of rule. Possible values are:	character	1
	F Filter		

Table 11. The EVENT_RULES_V view (continued)

Column name	Description	Type	Length
	Q Sequence		
	S Set		
Is_draft	If the event rule definition is currently enabled. Possible values are: Y Yes N No	character	1
Event_rule_status	The status of the event rule. Possible values are: active The event rule was activated successfully. update pending The event rule whose status is active was updated and must be deployed again. error during update An error occurred deploying the active event rule that has been updated. activation pending The event rule is waiting to be activated. error during activation An error occurred activating the event rule. deactivation pending The event rule was set to isDraft and must be deployed again to reflect the new status. error during deactivation An error occurred deactivating the event rule. not active The event rule is not active.	character	1

Table 11. The EVENT_RULES_V view (continued)

Column name	Description	Type	Length
Valid_from	The starting date from which the event rule is ready to be activated and therefore deployed.	date	10 In D B2® 9 In Or a cle
Valid_to	The last date that the event rule is active and therefore deployed.	date	10 In D B2® 9 In Or a cle
Start_offset	The start time when the event rule becomes active and ready to be deployed. This time is expressed in milliseconds calculated as an offset starting from 00.00 a.m. For example, if the start time is 11:30 a.m. the value is $((11 * 60) + 30) * 60 * 1000 = 41400000$.	integer	12
End_offset	The end time when the event rule is no longer active. This time is expressed in milliseconds calculated as an offset starting from 00.00 a. m. For example, if the end time is 11:30 a. m. the value is $((11 * 60) + 30) * 60 * 1000 = 41400000$.	integer	12
Time_zone	The time zone defined for the event rule that the product uses to deploy the rule.	string	40
Time_interval	The length of time after which the timeout action is to start.	integer	12
Group_attribute_list	A comma-separated list of attributes on which are correlated the events defined for the rule.	string	not defined

FILE_REFS_V

The FILE_REFS_V view displays information about jobs and job streams that depend on a file.

Table 12. The FILE_REFS_V view

Column name	Description	Type	Length
Workstation_identifier	The identifier of the workstation where the file is defined.	character	16
Workstation_name	The name of the workstation where the file is defined.	string	16
File_identifier	The identifier of the file on which jobs and job streams depend.	character	16
File_name	The name of the file on which jobs and job streams depend.	string	148
File_fol_id	The identifier of the folder where the file is stored.	character	16
File_fol_name	The name of the folder where the file is stored.	string	801
Dep_job_stream_wks_identifier	The identifier of the workstation where the job stream that depends on the file specified in the File_name column is defined.	character	16
Dep_job_stream_wks_name	The name of the workstation where the job stream that depends on the file specified in the File_name column is defined.	string	16
Dep_job_stream_folder_id	The identifier of the folder containing the job stream that depends on the file specified in the File_identifier column.	character	16
Dep_job_stream_folder_name	The name of the folder containing the job stream that depends on the file specified in the File_identifier column.	string	801
Dep_job_stream_identifier	The identifier of the job stream that depends on the file specified in the File_identifier column.	character	16
Dep_job_stream_name	The name of the job stream that depends on the file specified in the File_name column.	string	16
Dep_job_stream_valid_from	The starting date from which the dependent job stream is included in a production plan if selected by a run cycle.	date	10 In D B2®

Table 12. The FILE_REFS_V view (continued)

Column name	Description	Type	Length
			9
			In Ora cle
Dep_job_stream_valid_to	The last date that the dependent job stream is included in a production plan if selected by a run cycle.	date	10
			In D B2®
			9
			In Ora cle
Dep_job_wks_identifier	The identifier of the workstation where the job that depends on the file specified in the File_identifier column is defined. If this field is not displayed, the job does not depend on any file.	character	16
Dep_job_wks_name	The name of the workstation where the job that depends on the file specified in the File_name column is defined. If this field is not displayed, the job does not depend on any file.	string	16
Dep_job_folder_id	The identifier of the folder containing the job that depends on the file specified in the File_identifier column.	character	16
Dep_job_folder_name	The name of the folder containing the job that depends on the file specified in the File_identifier column.	string	801
Dep_job_identifier	The identifier of the job that depends on the file specified in the File_identifier column. If this field is not displayed, the job does not depend on any file.	character	16
Dep_job_name	The name of the job that depends on the file specified in the File_name column. If this field is not displayed, the job does not depend on any file.	string	40
Dep_job_definition_identifier	The identifier of the job definition of the job that depends on the file specified in the File_identifier	character	16

Table 12. The FILE_REFS_V view (continued)

Column name	Description	Type	Length
	column. If this field is not displayed the job does not depend on a file.		
Dep_job_definition_name	The name of the job definition of the job that depends on the file specified in the File_name column. If this field is not displayed, the job does not depend on a file.	string	40
Workstation_folder_id	The identifier of the folder in which the workstation is defined.	character	16
Workstation_folder_name	The name of the folder in which the workstation is defined.	string	801
Workstation_symphony_id	An identifier used in the Symphony file to identify the workstation.	string	16
Dep_job_stream_wks_folder_id	The identifier of the folder containing the workstation of the job stream that depends on the file specified in the File_id column.	character	16
Dep_job_stream_wks_folder_name	The name of the folder containing the workstation of the job stream that depends on the file specified in the File_id column.	string	801
Dep_job_stream_wks_symphony_id	An identifier used in the Symphony file to identify the workstation of the job stream that depends on the file specified in the File_id column.	string	16
Dep_job_wks_folder_id	The identifier of the folder containing the workstation of the job that depends on the file specified in the File_id column.	character	16
Dep_job_wks_folder_name	The name of the folder containing the workstation of the job that depends on the file specified in the File_id column.	string	801
Dep_job_wks_symphony_id	An identifier used in the Symphony file to identify the workstation of the job that depends on the file specified in the File_id column.	string	16

Output example

[Table 13: FILE_REFS_V output example on page 29](#) shows an example of the output for the FILE_REFS_V view.

INTERNETWORK_DEPS_V

The INTERNETWORK_DEPS_V view displays information about jobs and job streams that depend on an internetwork dependency.

Table 14. The INTERNETWORK_DEPS_V view

Column name	Description	Type	Length
Internetwork_dependency	The internetwork dependency on which the job and job stream depend.	string	255
Network_agent_identifier	The identifier of the network agent where the internetwork dependency is resolved.	character	16
Network_agent_name	The name of the network agent where the internetwork dependency is resolved.	string	16
Dep_job_stream_wks_identifier	The identifier of the workstation where the job stream that depends on the internetwork dependency is defined.	character	16

Table 14. The INTERNETWORK_DEPS_V view (continued)

Column name	Description	Type	Length
Dep_job_stream_wks_name	The name of the workstation where the job stream that depends on the internetwork dependency is defined.	string	16
Dep_job_stream_folder_id	The identifier of the folder containing the job stream that depends on the internetwork dependency.	character	16
Dep_job_stream_folder_name	The name of the folder containing the job stream that depends on the internetwork dependency.	string	801
Dep_job_stream_identifier	The identifier of the job stream that depends on the internetwork dependency.	character	16
Dep_job_stream_name	The name of the job stream that depends on the internetwork dependency.	string	16
Dep_job_stream_valid_from	The starting date from which the dependent job stream is included in a production plan if selected by a run cycle.	date	10 In DB2® 9 In Ora cle
Dep_job_stream_valid_to	The last date that the dependent job stream is included in a production plan if selected by a run cycle.	date	10 In DB2® 9 In Ora cle
Dep_job_wks_identifier	The identifier of the workstation where the job that depends on the internetwork dependency is defined. If this field is not displayed, the job does not depend on any internetwork dependency.	character	16
Dep_job_wks_name	The name of the workstation where the job that depends on the internetwork dependency is defined. If this field is not displayed, the job does not depend on any internetwork dependency.	string	16

Table 14. The INTERNETWORK_DEPS_V view (continued)

Column name	Description	Type	Length
Dep_job_identifier	The identifier of the job that depends on the internetwork dependency. If this field is not displayed, the job does not depend on any internetwork dependency.	character	16
Dep_job_name	The name of the job that depends on the internetwork dependency. If this field is not displayed, the job does not depend on any internetwork dependency.	string	40
Dep_job_folder_id	The identifier of the folder containing the job that depends on the internetwork dependency.	character	16
Dep_job_folder_name	The name of the folder containing the job that depends on the internetwork dependency.	string	801
Dep_job_definition_identifier	The identifier of the job definition that depends on the internetwork dependency. If this field is not displayed, the job does not depend on any internetwork dependency.	character	16
Dep_job_definition_name	The name of the job definition that depends on the internetwork dependency. If this field is not displayed, the job does not depend on any internetwork dependency.	string	40
Dep_job_stream_wks_folder_id	The identifier of the folder containing the workstation of the job stream that depends on the internetwork dependency.	character	16
Dep_job_stream_wks_folder_name	The name of the folder containing the workstation of the job stream that depends on the internetwork dependency.	string	801
Dep_job_stream_wks_symphony_id	An identifier used in the Symphony file to identify the workstation of the job stream that depends on the internetwork dependency.	string	16
Dep_job_wks_folder_id	The identifier of the folder in which the workstation is defined. The workstation is of the job that depends on the internetwork dependency.	character	16
Dep_job_wks_folder_name	The name of the folder in which the workstation is defined. The workstation is of the job that depends on the internetwork dependency.	string	801
Dep_job_wks_symphony_id	An identifier used in the Symphony file to identify the workstation of the job that depends on the internetwork dependency.	string	16

JOB_DEFINITION_REFS_V

The JOB_DEFINITION_REFS_V view displays information about the job streams in which a job appears.

Table 15. The JOB_DEFINITION_REFS_V view

Column name	Description	Type	Length
Job_stream_wks_identifier	The identifier of the workstation where the job streams in which the job appears are defined.	character	16
Job_stream_wks_name	The name of the workstation where the job streams in which the job appears are defined.	string	16
Job_stream_folder_id	The identifier of the folder containing the job stream in which the job appears.	character	16
Job_stream_folder_name	The name of the folder containing the job stream in which the job appears.	string	801
Job_stream_identifier	The identifier of the job stream in which the job appears.	character	16
Job_stream_name	The name of the job stream in which the job appears.	string	16
Job_stream_valid_from	The starting date from which the job stream is included in a production plan if selected by a run cycle.	date	10 In D B2® 9 In Or a cle
Job_stream_valid_to	The last date that the job stream is included in a production plan if selected by a run cycle.	date	10 In D B2® 9 In Or a cle

Table 15. The JOB_DEFINITION_REFS_V view (continued)

Column name	Description	Type	Length
Job_wks_identifier	The identifier of the workstation where the job specified in the Job_definition_identifier column is defined.	character	16
Job_wks_name	The name of the workstation where the job specified in the Job_name column is defined.	string	16
Job_folder_id	The identifier of the folder containing the job.	character	16
Job_folder_name	The name of the folder containing the job.	string	801
Job_name	The name of the job that appears in the job stream.	string	40
Job_definition_identifier	The identifier of the job definition of the job specified in the Job_name column.	character	16
Job_definition_name	The name of the job definition of the job specified in the Job_name column.	string	40
Job_stream_wks_folder_id	The identifier of the folder containing the workstation of the job stream.	character	16
Job_stream_wks_folder_name	The name of the folder containing the workstation of the job's job stream.	string	801
Job_stream_wks_symphony_id	An identifier used in the Symphony file to identify the workstation of the job's job stream.	string	16
Job_wks_folder_id	The identifier of the folder in which the workstation is defined. The workstation is of the job specified in the Job_name column.	character	16
Job_wks_folder_name	The name of the folder in which the workstation is defined. The workstation is of the job specified in the Job_name column.	string	801
Job_wks_symphony_id	An identifier used in the Symphony file to identify the workstation of the job specified in the Job_name column.	string	16

JOB_DEPS_V

The JOB_DEPS_V view displays information about jobs and job streams that depend on a job.

Table 17. The JOB_DEPS_V view

Column name	Description	Type	Length
Type_of_dependency	The type of dependency. Possible values are: • Internal job dependency • Internal conditional job dependency • External job dependency • External conditional job dependency • External job stream dependency • External conditional job stream dependency	character	42
Job_identifier	The identifier of the job on which the jobs and job streams depend.	character	16
Job_name	The name of the job on which the jobs and job streams depend.	string	40

Table 17. The JOB_DEPS_V view (continued)

Column name	Description	Type	Length
Job_stream_wks_identifier	The identifier of the workstation where the job stream that contains the job on which the jobs and job streams depend is defined.	character	16
Job_stream_wks_name	The name of the workstation where the job stream that contains the job on which the jobs and job streams depend is defined.	string	16
Job_stream_folder_id	The identifier of the folder that includes the job stream containing the job on which the jobs and job streams depend.	character	16
Job_stream_folder_name	The name of the folder that includes the job stream containing the job on which the jobs and job streams depend.	string	801
Job_stream_identifier	The identifier of the job stream that contains the job on which the jobs and job streams depend.	character	16
Job_stream_name	The name of the job stream that contains the job on which the jobs and job streams depend.	string	16
Dep_job_stream_wks_identifier	The identifier of the workstation where the job stream that depends on the job specified in the Job_identifier column is defined.	character	16
Dep_job_stream_wks_name	The name of the workstation where the job stream that depends on the job specified in the Job_name column is defined.	string	16
Dep_job_stream_folder_id	The identifier of the folder containing the job stream that depends on the job specified in the Job_identifier column.	character	16
Dep_job_stream_folder_name	The name of the folder containing the job stream that depends on the job specified in the Job_identifier column.	string	801
Dep_job_stream_identifier	The identifier of the job stream that depends on the job specified in the Job_identifier column.	character	16
Dep_job_stream_name	The name of the job stream that depends on the job specified in the Job_name column.	string	16

Table 17. The JOB_DEPS_V view (continued)

Column name	Description	Type	Length
Dep_job_stream_valid_from	The starting date from which the dependent job stream is included in a production plan if selected by a run cycle.	date	10 In D B2® 9 In Or a cle
Dep_job_stream_valid_to	The last date that the dependent job stream is included in a production plan if selected by a run cycle.	date	10 In D B2® 9 In Or a cle
Dep_job_identifier	The identifier of the job that depends on the job specified in the Job_name column. If this field is not displayed, the job or the job stream does not depend on any job.	Character	16
Dep_job_name	The name of the job that depends on the job specified in the Job_name column. If this field is not displayed, the job or the job stream does not depend on any job.	string	40
Dep_job_critical	The job specified in the Dep_job_name column is a critical job. Possible values are: Y Yes N No	character	1
Conditional_dep_id	The identifier of the dependency where the output conditions are specified. Valid only for the Type_of_dependency column:	character	16

Table 17. The JOB_DEPS_V view (continued)

Column name	Description	Type	Length
	• Internal conditional job dependency • External conditional job dependency • External conditional job stream dependency		
Condition_on_success	The condition on SUCCESS status is enabled. Possible values are: Y Yes N No Valid only for the Type_of_dependency column: • Internal conditional job dependency • External conditional job dependency • External conditional job stream dependency	character	1
Condition_on_abend	The condition on ABEND status is enabled. Possible values are: Y Yes N No Valid only for the Type_of_dependency column: • Internal conditional job dependency • External conditional job dependency • External conditional job stream dependency	character	1
Condition_on_fail	The condition on FAIL status is enabled. Possible values are: Y Yes N No	character	1

Table 17. The JOB_DEPS_V view (continued)

Column name	Description	Type	Length
	Valid only for the Type_of_dependency column: • Internal conditional job dependency • External conditional job dependency • External conditional job stream dependency		
Condition_on_execute	The condition on EXECUTE status is enabled. Possible values are: Y Yes N No Valid only for the Type_of_dependency column: • Internal conditional job dependency • External conditional job dependency • External conditional job stream dependency	character	1
Condition_on_suppress	The condition on SUPPRESS status is enabled. Possible values are: Y Yes N No Valid only for the Type_of_dependency column: • Internal conditional job dependency • External conditional job dependency • External conditional job stream dependency	character	1
Join_id	The identifier of the join containing more than one conditional dependency. Valid only for the Type_of_dependency column:	character	16

Table 17. The JOB_DEPS_V view (continued)

Column name	Description	Type	Length
	• Internal conditional job dependency • External conditional job dependency • External conditional job stream dependency		
Join_name	The name of the join containing more than one conditional dependency. Valid only for the Type_of_dependency column: • Internal conditional job dependency • External conditional job dependency • External conditional job stream dependency	string	16
Join_quantity	The number of dependencies that must be satisfied in the join specified by Join_name. Valid only for the Type_of_dependency column: • Internal conditional job dependency • External conditional job dependency • External conditional job stream dependency	integer	5
Job_stream_wks_folder_id	The identifier of the folder containing the workstation of the job stream.	character	16
Job_stream_wks_folder_name	The name of the folder containing the workstation of the job's job stream.	string	801
Job_stream_wks_symphony_id	An identifier used in the Symphony file to identify the workstation of the job's job stream.	string	16
Dep_job_stream_wks_folder_id	The identifier of the folder containing the workstation of the job stream that depends on the job.	character	16
Dep_job_stream_wks_folder_name	The name of the folder containing the workstation of the job stream that depends on the job.	string	801
Dep_job_stream_wks_symphony_id	An identifier used in the Symphony file to identify the workstation of the job stream that depends on the job.	string	16

Output example

Table 18: JOB_DEPS_V view output example on page 40 shows an example of the output for the JOB_DEPS_V view.

Table 18. JOB_DEPS_V view output example

JOB_HISTORY_V

The JOB_HISTORY_V view displays information about job history.

Table 19. The JOB_HISTORY_V view

Column name	Description	Type	Length
Workstation_name	The name of the workstation or workstation class where the job was scheduled to run.	string	16
Job_stream_wks_name_in_run	The name of the workstation or workstation class where the job stream ran.	string	16
Job_stream_folder_name	The name of the folder where the job stream that ran is contained.	string	801

Table 19. The JOB_HISTORY_V view (continued)

Column name	Description	Type	Length
Job_definition_identifier	The identifier of the job definition.	character	16
Job_name	The name of the job.	string	40
Job_folder_id	The identifier of the folder that includes the job for which you want information displayed.	character	16
Job_folder_name	The name of the folder containing the job for which you want information displayed.	string	801
Job_run_date_time	The date and time when the job ran.	timestamp	26 In D B2® 35 In Or a cle
Late_start_time	How late the job started with respect to the latest start time. This time is expressed in milliseconds.	integer	12
Late_end_time	How late the job ended with respect to the deadline. This time is expressed in milliseconds.	integer	12
Planned_duration	The time that a job was expected to complete. This time is expressed in milliseconds.	integer	12
Job_start_time	The date and time when the job was scheduled to start running.	timestamp	26 In D B2® 35 In Or a cle

Table 19. The JOB_HISTORY_V view (continued)

Column name	Description	Type	Length
Job_end_time	The date and time when the job was scheduled to stop running.	timestamp	26 In D B2® 35 In Or a cle
Workstation_name_in_run	The name of the workstation or workstation class where the job ran.	string	16
Actual_workstation_name_in_run	The name of the workstation where the job actually ran. Useful for jobs defined on X-AGENT, POOL and D-POOL workstation types.	string	16
Workstation_license_type	The type of license associated with the Actual_workstation_name_in_run . Supported values are: J PER_JOB S PER_SERVER	character	1
Job_stream_name_in_run	The name of the job stream to which the job belonged when it ran.	string	16
Job_name_in_run	The name of the job when it ran.	string	40
Job_identifier_in_run	The identifier of the job when it ran.	character	16
Total_elapsed_time	The amount of time that the job took to run, for this run. This time is expressed in milliseconds.	integer	12
Total_cpu_time	The total amount of CPU time the job used to run, for this run. This time is expressed in milliseconds.	integer	12
Long_duration	If the job lasted longer than planned. Possible values are: Y Yes	character	1

Table 19. The JOB_HISTORY_V view (continued)

Column name	Description	Type	Length
Job_status	N	character	1
	No		
	The status of the job. Possible values are:		
	A		
	Abend		
	S		
Rerun_type	Successful	character	1
	U		
	Unknown		
	E		
	Error		
	The type of run associated with the job instance. Possible values are:		
Rerun_number	R	integer	10
	Rerun; the instance is a rerun of the job present in the plan.		
	E		
	Rerun every; the rerun of a job for which you defined an every option.		
	F		
	Rerun from; the rerun of a job for which you defined a from option.		
Return_code	C	integer	10
	Recovery: the job is a recovery job associated with the planned job.		
Job_number	N	integer	10
	Regular: the job is not a rerun		

Table 19. The JOB_HISTORY_V view (continued)

Column name	Description	Type	Length
Job_stream_instance_id	The identifier of the job stream instance to which the job belonged when it ran.	integer	20
job_critical_latest_time	The latest date and time when the critical job should have started to complete on time.	timestamp	26 In D B2® 35 In Or a cle
Job_critical	If the job was flagged as critical. Possible values are: Y Yes N No	character	1
Job_promoted	If the job was promoted to prioritize its execution. Possible values are: Y Yes N No	character	1
Log_time	The date and time when the job run is logged.	timestamp	26 In D B2® 35 In Or a cle
User_login	The user name under which the job instance ran.	string	47

Table 19. The JOB_HISTORY_V view (continued)

Column name	Description	Type	Length
Workstation_folder_id	The identifier of the folder in which the workstation is defined.	character	16
Workstation_folder_name	The name of the folder in which the workstation is defined.	string	801
Workstation_symphony_id	An identifier used in the Symphony file to identify the workstation.	string	16

JOB_STATISTICS_V

The JOB_STATISTICS_V view displays information about jobs.

Table 20. The JOB_STATISTICS_V view

Column name	Description	Type	Length
Workstation_name	The name of the workstation or workstation class where the job was defined.	string	16
Job_definition_identifier	The identifier of the job definition.	character	16
Job_name	The name of the job.	string	40
Job_description	A description of the job.	string	120
Job_login_user	The user name under which the job runs.	string	47
Job_script_name	The script or the command that the job runs.	string	4095 In DB2® 4000 In Oracle
Job_folder_id	The identifier of the folder that includes the job for which you want information displayed.	character	16
Job_folder_name	The name of the folder containing the job for which you want information displayed.	string	801
Recovery_job_definition_id	The identifier of the job definition to be run, if the job specified in the job_definition_identifier column ends abnormally.	character	16

Table 20. The JOB_STATISTICS_V view (continued)

Column name	Description	Type	Length
Recovery_job_name	The name of the job to run if the job specified in the Job_name column ends abnormally.	string	40
Recovery_option	The recovery options for the job. Possible values are: C Continue R Rerun S Stop	character	1
Recovery_repeat_interval	The interval in milliseconds after which a new execution of the job is launched if the job failed	integer	12
Recovery_repeat_occurrences	The number of maximum attempts to launch the job if it failed	integer	5
Recovery_repeat_affinity	Specify whether the failed job must be rerun on the same workstation or the target workstation must be selected by the broker. Supported values are: Y Yes: rerun on the same workstation. N No: the target workstation must be selected by the broker.	character	1
Recovery_prompt	The text of the recovery prompt to display if the job ends abnormally.	string	200
Job_modify_user	The name of the user who created or modified the job definition.	string	50
Successful_runs	The number of times the job ran successfully.	integer	10
Abended_runs	The number of times the job ended abnormally.	integer	10
Long_duration_runs	The number of times the jobs with long duration ran.	integer	10
Suppressed_runs	The number of jobs that have been suppressed, that is the number of jobs whose until time has been reached, but the job has not yet started.	integer	10

Table 20. The JOB_STATISTICS_V view (continued)

Column name	Description	Type	Length
Late_start_runs	The number of times the jobs ended after the latest start time was reached.	integer	10
Late_end_runs	The number of times the jobs ended after the deadline was reached.	integer	10
Total_reruns	The total number of times the job reran.	integer	10
Average_cpu_time	The average amount of CPU time the job took to run. This time is expressed in milliseconds.	integer	12
Average_elapsed_time	The average time the job took to run. This time is expressed in milliseconds.	integer	12
Total_elapsed_time	The sum of the times the job used the CPU and the time the job waited for other processes to release the CPU for all its runs. This time is expressed in milliseconds.	integer	12
Total_cpu_time	The total amount of CPU time the job used to run, for all its runs. This time is expressed in milliseconds.	integer	12
Last_cpu_time	Specifies how much CPU time the job used the last time it ran. This time is expressed in milliseconds.	integer	12
Last_elapsed_time	The elapsed time recorded during the job last run of the job. This time is expressed in milliseconds.	integer	12
Last_run_date	The date and time the job last ran.	timestamp	26 In DB2® 35 In Oracle
Max_cpu_time	The maximum CPU time recorded for all the job runs. This time is expressed in milliseconds.	integer	12
Max_elapsed_time	The maximum elapsed time recorded for all its runs. This time is expressed in milliseconds.	integer	12
Max_run_date	The date and time when the job took the longest time to run.	timestamp	26 In DB2®

Table 20. The JOB_STATISTICS_V view (continued)

Column name	Description	Type	Length
			35
			In Ora cle
Min_cpu_time	The minimum CPU time recorded for all the runs. This time is expressed in milliseconds.	integer	12
Min_elapsed_time	The minimum elapsed time recorded for all its runs.	integer	12
Min_run_date	The date and time when the job took the shortest time to run.	timestamp	26
			In DB2®
			35
			In Ora cle
Workstation_folder_id	The identifier of the folder in which the workstation is defined.	character	16
Workstation_folder_name	The name of the folder in which the workstation is defined.	string	801
Workstation_symphony_id	An identifier used in the Symphony file to identify the workstation.	string	16

JOB_STREAM_DEPS_V

The JOB_STREAM_DEPS_V view displays information about jobs and job streams that depend on a job stream.

Table 21. The JOB_STREAM_DEPS_V view

Column name	Description	Type	Length
Type_of_dependency	The type of dependency. Possible values are: • Job dependency • Conditional job dependency • Job stream dependency • Conditional job stream dependency	character	33

Table 21. The JOB_STREAM_DEPS_V view (continued)

Column name	Description	Type	Length
Job_stream_wks_identifier	The identifier of the workstation where the job stream on which the jobs or job streams depend is defined.	character	16
Job_stream_wks_name	The name of the workstation where the job stream on which the jobs or job streams depend is defined.	string	16
Job_stream_folder_id	The identifier of the folder that includes the job stream on which the jobs and job streams depend.	character	16
Job_stream_folder_name	The name of the folder that includes the job stream on which the jobs and job streams depend.	string	801
Job_stream_identifier	The identifier of the job stream on which the jobs and job streams depend.	character	16
Job_stream_name	The name of the job stream on which the job or job stream depends.	string	16
Dep_job_stream_wks_identifier	The identifier of the workstation where the job stream that depends on the job stream is defined.	character	16
Dep_job_stream_wks_name	The name of the workstation where the job stream that depends on the job stream is defined.	string	16
Dep_job_stream_folder_id	The identifier of the folder containing the job stream that depends on the job stream.	character	16
Dep_job_stream_folder_name	The name of the folder containing the job stream that depends on the job stream.	string	801
Dep_job_stream_identifier	The identifier of the job stream that depends on the job stream.	character	16
Dep_job_stream_name	The name of the job stream that depends on the job stream.	string	16
Dep_job_stream_valid_from	The starting date from which the dependent job stream is included in a production plan if selected by a run cycle.	date	10 In D B2® 9 In Ora cle

Table 21. The JOB_STREAM_DEPS_V view (continued)

Column name	Description	Type	Length
Dep_job_stream_valid_to	The last date that the dependent job stream is included in a production plan if selected by a run cycle.	date	10 In D B2® 9 In Ora cle
Dep_job_wks_identifier	The identifier of the workstation where the job that depends on the job stream is defined. If this field is not displayed, the job does not depend on any job stream.	character	16
Dep_job_wks_name	The name of the workstation where the job that depends on the job stream is defined. If this field is not displayed, the job does not depend on any job stream.	string	16
Dep_job_identifier	The identifier of the job that depends on the job stream. If this field is not displayed, the job does not depend on any job stream.	character	16
Dep_job_name	The name of the job that depends on the job stream. If this field is not displayed, the job does not depend on any job stream.	string	40
Dep_job_critical	The job specified in the Dep_job_name column is a critical job. Possible values are: Y Yes N No	character	1
Dep_job_folder_id	The identifier of the folder containing the job that depends on the job stream.	character	16
Dep_job_folder_name	The name of the folder containing the job that depends on the job stream.	string	801
Dep_job_definition_identifier	The identifier of the job definition that depends on the job stream. If this field is not displayed, the job does not depend on any job stream.	character	16

Table 21. The JOB_STREAM_DEPS_V view (continued)

Column name	Description	Type	Length
Dep_job_definition_name	The name of the job definition that depends on the job stream. If this field is not displayed, the job does not depend on any job stream.	string	40
Conditional_dep_id	The identifier of the dependency where the output conditions are specified. Valid only for the Type_of_dependency column: • Job dependency • Conditional job dependency • Job stream dependency • Conditional job stream dependency	character	16
Condition_on_success	The condition on SUCCESS status is enabled. Possible values are: Y Yes N No Valid only for the Type_of_dependency column: • Job dependency • Conditional job dependency • Job stream dependency • Conditional job stream dependency	character	1
Condition_on_abend	The condition on ABEND status is enabled. Possible values are: Y Yes N No Valid only for the Type_of_dependency column: • Job dependency • Conditional job dependency	character	1

Table 21. The JOB_STREAM_DEPS_V view (continued)

Column name	Description	Type	Length
	• Job stream dependency • Conditional job stream dependency		
Condition_on_fail	The condition on FAIL status is enabled. Possible values are: Y Yes N No Valid only for the Type_of_dependency column: • Job dependency • Conditional job dependency • Job stream dependency • Conditional job stream dependency	character	1
Condition_on_execute	The condition on EXECUTE status is enabled. Possible values are: Y Yes N No Valid only for the Type_of_dependency column: • Internal conditional job dependency • External conditional job dependency • External conditional job stream dependency	character	1
Condition_on_suppress	The condition on SUPPRESS status is enabled. Possible values are: Y Yes N No	character	1

Table 21. The JOB_STREAM_DEPS_V view (continued)

Column name	Description	Type	Length
	Valid only for the Type_of_dependency column:		
	• Job dependency • Conditional job dependency • Job stream dependency • Conditional job stream dependency		
Job_stream_identifier	The identifier of the job stream on which the job or job stream depends.	character	16
Join_id	The identifier of the join containing more than one conditional dependency. Valid only for the Type_of_dependency column:	character	16
	• Job dependency • Conditional job dependency • Job stream dependency • Conditional job stream dependency		
Join_name	The name of the join containing more than one conditional dependency. Valid only for the Type_of_dependency column:	string	16
	• Job dependency • Conditional job dependency • Job stream dependency • Conditional job stream dependency		
Join_quantity	The number of dependencies that must be satisfied in the join specified by Join_name . Valid only for the Type_of_dependency column:	integer	5
	• Job dependency • Conditional job dependency • Job stream dependency • Conditional job stream dependency		
Job_stream_wks_folder_id	The identifier of the folder containing the workstation of the job stream.	character	16

Table 21. The JOB_STREAM_DEPS_V view (continued)

Column name	Description	Type	Length
Job_stream_wks_folder_name	The name of the folder containing the workstation of the job stream.	string	801
Job_stream_wks_symphony_id	An identifier used in the Symphony file to identify the workstation of the job stream.	string	16
Dep_job_wks_folder_id	The identifier of the folder in which the workstation is defined. The workstation is of the job stream on which the job or job stream depends.	character	16
Dep_job_wks_folder_name	The name of the folder in which the workstation is defined. The workstation is of the job stream on which the job or job stream depends.	string	801
Dep_job_wks_symphony_id	An identifier used in the Symphony file to identify the workstation of the job stream on which the job or job stream depends.	string	16
Dep_job_stream_wks_folder_id	The identifier of the folder containing the workstation of the job stream on which the job or job stream depends.	character	16
Dep_job_stream_wks_folder_name	The name of the folder containing the workstation of the job stream on which the job or job stream depends.	string	801
Dep_job_stream_wks_symphony_id	An identifier used in the Symphony file to identify the workstation of the job stream on which the job or job stream depends.	string	16

JOB_STREAM_REFS_V

The JOB_STREAM_REFS_V view displays information about job streams.

Table 23. The JOB_STREAM_REFS_V view

Column name	Description	Type	Length
Workstation_identifier	The identifier of the workstation where the job stream is defined.	character	16
Workstation_name	The name of the workstation where the job stream is defined.	string	16
Job_stream_folder_id	The identifier of the folder containing the job stream for which you want information displayed.	character	16
Job_stream_folder_name	The name of the folder containing the job stream for which you want information displayed.	string	801
Job_stream_identifier	The identifier of the job stream for which you want information displayed.	character	16
Job_stream_name	The name of the job stream for which you want information displayed.	string	16

Table 23. The JOB_STREAM_REFS_V view (continued)

Column name	Description	Type	Length
Job_stream_valid_from	The starting date from which the job stream is included in a production plan if selected by a run cycle.	date	10 In DB2® 9 In Oracle
Job_stream_valid_to	The last date that the job stream is included in a production plan if selected by a run cycle.	date	10 In DB2® 9 In Oracle
Calendar_identifier	The identifier of the non-working days calendar.	character	16
Calendar_name	The name of the non-working days calendar.	string	16
Calendar_folder_id	The identifier of the folder where the calendar is stored.	character	16
Calendar_folder_name	The name of the folder where the calendar is stored.	string	801
Workstation_folder_id	The identifier of the folder in which the workstation of the job stream is defined.	character	16
Workstation_folder_name	The name of the folder in which the workstation of the job stream is defined.	string	801
Workstation_symphony_id	An identifier used in the Symphony file to identify the workstation of the job stream.	string	16

Output example

[Table 24: JOB_STREAM_REFS_V view output example on page 56](#) shows an example of the output for the JOB_STREAM_REFS_V view.

LOG_MESSAGES_V

The LOG_MESSAGES_V view displays information about the messages logged by the actions.

Table 25. The LOG_MESSAGES_V view

Column name	Description	Type	Length
Log_time	The time when the message associated with the action was logged.	timestamp	26 In D B2® 35 In Or a cle
Information_type	The type of message that was logged. Possible values are: I Informational W Warning	character	1

Table 25. The LOG_MESSAGES_V view (continued)

Column name	Description	Type	Length
E			
Error			
Event_rule_name	The name of the event rule associated with the action.	string	40
Event_rule_type	The type of event rule. Possible values are:	character	1
F			
Filter			
Q			
Sequence			
S			
Set			
Event_scope	The scope of the event. That is the most meaningful information related to the event. The plug-in defines the information to be inserted.	string	120
Event_type	The type of event.	string	40
Source	The source string defined in the log action	string	128
Line_of_business	The line of business defined in the log action.	string	128
Owner_group	The owner group defined in the log action.	string	128
Message	The text of the message written to the log file.	string	512
workstation_name	The name of the workstation where the log is triggered.	string	128

PLAN_DOMAINS_V

The PLAN_DOMAINS_V view displays information about the domains in the plan.

Table 26. The PLAN_DOMAINS_V view

Column name	Description	Type	Length
Domain_id	The identifier of the domain.	character	16
Parent_domain_id	The identifier of the parent domain.	character	16
Domain_Name	The name of the domain specified in the Domain_id column.	string	16

Table 26. The PLAN_DOMAINS_V view (continued)

Column name	Description	Type	Length
Parent_domain_name	The name of the domain that is parent of the domain specified in the Domain_id column.	string	16
Domain_manager_name	A hexadecimal identifier used in the Symphony file to identify the domain manager of the domain specified in the Domain_id column.	string	16
Domain_manager_orig_name	The name of the domain manager of the domain specified in the Domain_id column.	string	16
Domain_manager_folder_id	The identifier of the folder containing the domain manager specified in the Domain_id column.	character	16
Domain_manager_folder_name	The name of the folder containing the domain manager specified in the Domain_id column.	string	801

PLAN_FILE_REFS_V

The PLAN_FILE_REFS_V view displays information about jobs and job streams in plan that depend on a file.

Table 27. The PLAN_FILE_REFS_V view

Column name	Description	Type	Length
File_name	The name of the file where the dependency is defined.	string	148
Qualifiers	The qualifier of the file specified in the File_id column.	string	148
File_id	The identifier of the file where the dependency is defined.	character	16
File_wks_id	The identifier of the workstation where the file specified in the File_id column is defined.	character	16
File_wks_name	A hexadecimal identifier used in the Symphony file to identify the workstation. The name of the workstation where the file specified in the File_id column is defined.	string	16
Workstation_original_name	The name of the workstation where the file specified in the File_id column is defined.	string	16
Workstation_folder_id	The identifier of the folder in which the workstation is defined.	character	16
Workstation_folder_name	The name of the folder in which the workstation is defined.	string	801
Job_stream_refs_id	The identifier of the job stream that depends on the file specified in the File_id column.	character	16

Table 27. The PLAN_FILE_REFS_V view (continued)

Column name	Description	Type	Length
Job_refs_id	The identifier of the job that depends on the file specified in the File_id column.	character	16
Job_refs_js_wks_name	A hexadecimal identifier used in the Symphony file to identify the workstation of the job's job stream that depends on the file specified in the File_id column.	string	16
Job_refs_js_wks_original_name	The name of the workstation of the job's job stream that depends on the file specified in the File_id column.	string	16
Jobs_refs_js_wks_folder_id	The identifier of the folder in which the workstation is defined. The workstation is of the job's job stream that depends on the file specified in the File_id column.	character	16
Jobs_refs_js_wks_folder_name	The name of the folder in which the workstation is defined. The workstation is of the job's job stream that depends on the file specified in the File_id column.	string	801
Job_refs_js_id	The identifier of the job's job stream that depends on the file specified in the File_id column.	character	16
Job_refs_js_name	The name of the job's job stream that depends on the file specified in the File_id column.	string	16
Job_refs_js_sched_time	The input arrival time of the job's job stream that depends on the file specified in the File_id column.	timestamp	10
Job_refs_wks_id	The identifier of the workstation of the job that depends on the file specified in the File_id column.	character	16
Job_refs_wks_name	A hexadecimal identifier used in the Symphony file to identify the workstation of the of the job that depends on the file specified in the File_id column.	string	16
Job_refs_wks_original_name	The name of the workstation of the job that depends on the file specified in the File_id column.	string	16
Jobs_refs_wks_folder_id	The identifier of the folder in which the workstation is defined. The workstation is of the job that depends on the file specified in the File_id column.	character	16
Jobs_refs_wks_folder_name	The name of the folder in which the workstation is defined. The workstation is of the job that depends on the file specified in the File_id column.	string	801
Job_refs_name	The name of the job that depends on the file specified in the File_id column.	string	40

Table 27. The PLAN_FILE_REFS_V view (continued)

Column name	Description	Type	Length
Job_stream_refs_wks_id	The identifier of the workstation of the job stream that depends on the file specified in the File_id column.	character	16
Job_stream_refs_wks_name	A hexiadecimal identifier used in the Symphony file to identify the workstation of the of the job stream that depends on the file specified in the File_id .	string	16
Job_stream_wks_original_name	The name of the workstation of the job stream that depends on the file specified in the File_id column.	string	16
Job_stream_wks_folder_id	The identifier of the folder containing the workstation of the job stream that depends on the file specified in the File_id column.	character	16
Job_stream_wks_folder_name	The name of the folder containing the workstation of the job stream that depends on the file specified in the File_id column.	string	801
Job_stream_refs_folder_name	The name of the folder that includes the job stream that depends on the file specified in the File_id column.	string	801
Job_stream_refs_folder_id	The identifier of the folder that includes the job stream that depends on the file specified in the File_id column.	character	16
Job_stream_refs_name	The name of the job stream that depends on the file specified in the File_id column.	string	16
Job_stream_refs_sched_time	The input arrival time of the job stream that depends on the file specified in the File_id column.	timestamp	10
Satisfied	If the file dependency is satisfied. Possible values are: Y Yes N No	character	1
Status	The file dependency status. Possible values are: S Satisfied N Not_satisfied U Undecided	character	1

PLAN_FILES_V

The PLAN_FILES_V view displays information about the files in the plan.

Table 28. The PLAN_FILES_V view

Column name	Description	Type	Length
File_id	The identifier of the file.	character	16
File_name	The name of the file.	string	148
Workstation_id	The identifier of the workstation where the file specified in the File_id column is defined.	character	16
Workstation_name	A hexadecimal identifier used in the Symphony file to identify the workstation.	string	16
Workstation_original_name	The workstation name.	string	16
Workstation_folder_id	The identifier of the folder in which the workstation is defined.	character	16
Workstation_folder_name	The name of the folder in which the workstation is defined.	string	801
Status	The file status. Possible values are: A Available N Not_available U Undecided	character	16
Qualifiers	The qualifier of the file specified in the File_id column.	string	148

PLAN_JOB_PREDECESSORS_V

The PLAN_JOB_PREDECESSORS_V view displays information about jobs and job streams predecessors of a job in the plan.

Table 29. The PLAN_JOB_PREDECESSORS_V view

Column name	Description	Type	Length
Job_name	The name of the job on which the dependency is defined.	string	40

Table 29. The PLAN_JOB_PREDECESSORS_V view (continued)

Column name	Description	Type	Length
Job_stream_wks_id	The identifier of the workstation of the job's job stream on which the dependency is defined.	character	16
Job_stream_wks_name	A hexadecimal identifier used in the Symphony file to identify the workstation of the job's job stream on which the dependency is defined.	string	16
Job_stream_wks_original_name	The name of the workstation of the job stream.	string	16
Job_stream_wks_folder_name	The name of the folder where the workstation of the job stream is defined.	string	801
Job_stream_wks_folder_id	The identifier of the folder where the workstation of the job stream is defined.	character	16
Job_stream_name	The name of the job's job stream on which the dependency is defined.	string	16
Job_wks_id	The identifier of the workstation of the job on which the dependency is defined.	character	40
Job_wks_name	A hexadecimal identifier used in the Symphony file to identify the workstation of the job on which the dependency is defined.	string	40
Job_wks_original_name	The name of the workstation of the job.	string	16
Job_wks_folder_name	The name of the folder where the workstation of the job is defined.	string	801
Job_wks_folder_id	The identifier of the folder where the workstation of the job is defined.	character	16
Job_id	The identifier of the job on which the dependency is defined.	character	16
Job_stream_pred_id	The identifier of the job's job stream that depends on the job specified in the Job_id column.	character	16
Job_pred_id	The identifier of the job that depends on the job specified in the Job_id column.	character	16
Job_pred_js_wks_id	The identifier of the workstation of the job's job stream that depends on the job specified in the Job_id column.	character	16
Job_pred_js_wks_name	A hexadecimal identifier used in the Symphony file to identify the workstation of the job's job stream that depends on the job specified in the Job_id column.	string	16

Table 29. The PLAN_JOB_PREDECESSORS_V view (continued)

Column name	Description	Type	Length
Job_pred_js_wks_original_name	The name of the workstation of the job's job stream that depends on the job specified in the Job_id column.	string	16
Job_pred_js_wks_folder_name	The name of the folder containing the workstation of the job's job stream that depends on the job specified in the Job_id column.	string	801
Job_pred_js_wks_folder_id	The identifier of the folder containing the workstation of the job's job stream that depends on the job specified in the Job_id column.	character	16
Job_pred_js_name	The name of the job's job stream that depends on the job specified in the Job_id column.	string	16
Job_pred_js_sched_time	The input arrival time of the job's job stream that depends on the job specified in the Job_id column.	timestamp	10
Job_pred_wks_id	A hexadecimal identifier used in the Symphony file to identify the workstation of the job that depends on the job specified in the Job_id column.	character	16
Job_pred_wks_name	A hexadecimal identifier used in the Symphony file to identify the workstation of the job that depends on the job specified in the Job_id column.	string	16
Job_pred_wks_original_name	The name of the workstation of the job that depends on the job specified in the Job_id column.	string	16
Job_pred_wks_folder_name	The name of the folder containing the workstation of the job that depends on the job specified in the Job_id column.	string	861
Job_pred_wks_folder_id	The identifier of the folder containing the workstation of the job that depends on the job specified in the Job_id column.	character	16
Job_pred_name	The name of the job that depends on the job specified in the Job_id column.	string	40
Job_stream_pred_wks_id	The identifier of the workstation of the job stream that depends on the job specified in the Job_id column.	character	16
Job_stream_pred_wks_name	The name of the workstation of the job stream that depends on the job specified in the Job_id column.	string	16
Job_stream_pred_wks_orig_name	The original name of the workstation of the job stream that depends on the job specified in the Job_id column.	string	16
Job_stream_pred_wks_fol_name	The name of the folder containing the workstation of the job stream that depends on the job specified in the Job_id column.	string	801

Table 29. The PLAN_JOB_PREDECESSORS_V view (continued)

Column name	Description	Type	Length
Job_stream_pred_wks_folder_id	The identifier of the folder containing the workstation of the job stream that depends on the job specified in the Job_id column.	character	16
Job_stream_pred_folder_id	The identifier of the folder containing the job stream that depends on the job specified in the Job_id column.	character	16
Job_stream_pred_folder_name	The name of the folder containing the job stream that depends on the job specified in the Job_id column.	string	801
Job_stream_pred_name	The name of the job stream that depends on the job specified in the Job_id column.	string	16
Job_stream_pred_sched_name	The input arrival time of job stream that depends on the job specified in the Job_id column.	timestamp	10
Satisfied	If the job's dependency is satisfied. Possible values are: Y Yes N No	character	1
Status	The job's dependency status. Possible values are: S Satisfied N Not_atisfied U Undecided	character	1
Dependency_type	The job's dependency type. Possible values are: I Internal J External_job S External_job_stream N Internetwork	character	1

Table 29. The PLAN_JOB_PREDECESSORS_V view (continued)

Column name	Description	Type	Length
Is_conditional_dependency	The job's dependency is a conditional dependency. Possible values are: Y Yes N No	character	1
Cond_dep_on_success	The condition is on SUCCESS. Valid only if the Is_conditional_dependency column is set to Y . Possible values are: Y Yes N No	character	1
Cond_dep_on_abend	The condition is on ABEND. Valid only if the Is_conditional_dependency column is set to Y . Possible values are: Y Yes N No	character	1
Cond_dep_on_fail	The condition is on FAIL. Valid only if the Is_conditional_dependency column is set to Y . Possible values are: Y Yes N No	character	1
Cond_dep_on_execute	The condition is on EXECUTE. Valid only if the Is_conditional_dependency column is set to Y . Possible values are: Y Yes	character	1

Table 29. The PLAN_JOB_PREDECESSORS_V view (continued)

Column name	Description	Type	Length
Cond_dep_on_suppress	N No The condition is on SUPPRESS. Valid only if the Is_conditional_dependency column is set to Y. Possible values are: Y Yes N No	character	1
Join_name	The name of the container of more of one conditional dependency. Valid only if the Is_conditional_dependency column is set to Y .	string	16
Join_quantity	The number of dependencies that must be satisfied in the join specified in Join_name . Valid only if the Is_conditional_dependency column is set to Y .	integer	5
Output_cond_list	The list of output conditions for this job stream dependency. Valid only if the Is_conditional_dependency column is set to Y .	string	2000

PLAN_JOB_STREAM_PREDECESSORS_V

The PLAN_JOB_STREAM_PREDECESSORS_V view displays information about job and job stream predecessors of a job stream in the plan.

Table 30. The PLAN_JOB_STREAM_PREDECESSORS_V view

Column name	Description	Type	Length
Job_stream_id	The identifier of the job stream on which the dependency is defined.	character	16
Job_stream_wks_id	The identifier of the workstation of the job stream on which the dependency is defined.	character	16
Job_stream_wks_name	A hexadecimal identifier used in the Symphony file to identify the workstation of the job stream on which the dependency is defined.	string	16
Job_stream_wks_original_name	The name of the workstation of the job stream on which the dependency is defined.	string	16

Table 30. The PLAN_JOB_STREAM_PREDECESSORS_V view (continued)

Column name	Description	Type	Length
Job_stream_wks_folder_name	The name of the folder in which the workstation of the job stream is defined. The job stream being that on which the dependency is defined.	string	801
Job_stream_wks_folder_id	The identifier of the folder in which the workstation is defined. The workstation being that of the job stream on which the dependency is defined.	character	16
Job_stream_folder_id	The identifier of the folder containing the job stream on which the dependency is defined.	character	16
Job_stream_folder_name	The name of the folder containing the job stream on which the dependency is defined.	string	801
Job_stream_name	The name of the job stream on which the dependency is defined.	string	16
Job_stream_pred_id	The identifier of the job stream that depends on the job stream specified in the Job_stream_id column.	character	16
Job_pred_id	The identifier of the job that depends on the job stream specified in the Job_stream_id column.	character	16
Job_pred_js_wks_id	The identifier of the workstation of the job's job stream that depends on the job stream specified in the Job_stream_id column.	character	16
Job_pred_js_wks_name	A hexadecimal identifier used in the Symphony file to identify the workstation of the job's job stream that depends on the job stream specified in the Job_stream_id column.	string	16
Job_pred_js_wks_original_name	The name of the workstation of the job's job stream that depends on the job stream specified in the Job_stream_id column.	string	16
job_pred_js_wks_folder_name	The name of the folder in which the workstation of the job's job stream is defined. The job stream being that which depends on the job stream specified in the Job_stream_id column.	string	801
job_pred_js_wks_folder_id	The identifier of the folder in which the workstation of the job's job stream is defined. The workstation being that of the job stream that depends on the job stream specified in the Job_stream_id column.	character	16

Table 30. The PLAN_JOB_STREAM_PREDECESSORS_V view (continued)

Column name	Description	Type	Length
Job_pred_js_name	The name of the job's job stream that depends on the job stream specified in the Job_stream_id column.	string	16
Job_pred_js_sched_time	The input arrival time of the job's job stream that depends on the job stream specified in the Job_stream_id column.	timestamp	10
Job_pred_wks_id	The identifier of the workstation of the job that depends on the job stream specified in the Job_stream_id column.	character	16
Job_pred_wks_name	The name used in the Symphony file to identify the workstation of the job that depends on the job stream specified in the Job_stream_id column.	string	16
Job_pred_wks_orig_name	The name of the workstation of the job that depends on the job stream specified in the Job_stream_id column.	string	16
Job_pred_wks_folder_name	The name of the folder in which the workstation of the job is defined. The job being that which depends on the job stream specified in the Job_stream_id column.	string	801
Job_pred_wks_folder_id	The identifier of the folder in which the workstation of the job is defined. The job being that which depends on the job stream specified in the Job_stream_id column.	character	16
Job_pred_name	The name of the job that depends on the job stream specified in the Job_stream_id column.	string	40
Job_stream_pred_wks_id	The identifier of the workstation of the job stream that depends on the job stream specified in the Job_stream_id column.	character	16
Job_stream_pred_wks_name	A hexadecimal identifier used in the Symphony file to identify the workstation of the job stream that depends on the job stream specified in the Job_stream_id column.	string	16
Job_stream_pred_wks_orig_name	The name of the workstation of the job stream that depends on the job stream specified in the Job_stream_id column.	string	16
Job_stream_pred_wks_fol_name	The name of the folder in which the workstation of the job stream is defined. The job stream being that which depends on the job stream specified in the Job_stream_id column.	string	801

Table 30. The PLAN_JOB_STREAM_PREDECESSORS_V view (continued)

Column name	Description	Type	Length
Job_stream_pred_wks_folder_id	The identifier of the folder in which the workstation of the job stream is defined. The job stream being that which depends on the job stream specified in the Job_stream_id column.	character	
Job_stream_pred_folder_id	The identifier of the folder containing the job stream that depends on the job stream specified in the Job_stream_id column.	character	16
Job_stream_pred_folder_name	The name of the folder containing the job stream that depends on the job stream specified in the Job_stream_id column.	string	801
Job_stream_pred_name	The name of the job stream that depends on the job stream specified in the Job_stream_id column.	string	16
Job_stream_pred_sched_time	The input arrival time of the job stream that depends on the job stream specified in the Job_stream_id column.	timestamp	10
Satisfied	If the job stream's dependency is satisfied. Possible values are: Y Yes N No	character	1
Status	The job stream's dependency status. Possible values are: S Satisfied N Not_satisfied U Undecided	character	1
Dependency_type	The job stream's dependency type. Possible values are: I Internal J External_job	character	1

Table 30. The PLAN_JOB_STREAM_PREDECESSORS_V view (continued)

Column name	Description	Type	Length
	S External_job_stream N Internetwork		
Is_conditional_dependency	The job stream's dependency is a conditional dependency. Possible values are: Y Yes N No	character	1
Cond_dep_on_success	The condition is on SUCCESS. Valid only if the Is_conditional_dependency column is set to Y. Possible values are: Y Yes N No	character	1
Cond_dep_on_abend	The condition is on ABEND. Valid only if the Is_conditional_dependency column is set to Y. Possible values are: Y Yes N No	character	1
Cond_dep_on_fail	The condition is on FAIL. Valid only if the Is_conditional_dependency column is set to Y. Possible values are: Y Yes N No	character	1

Table 30. The PLAN_JOB_STREAM_PREDECESSORS_V view (continued)

Column name	Description	Type	Length
Cond_dep_on_execute	The condition is on EXECUTE. Valid only if the Is_conditional_dependency column is set to Y . Possible values are: Y Yes N No	character	1
Cond_dep_on_suppress	The condition is on SUPPRESS. Valid only if the Is_conditional_dependency column is set to Y . Possible values are: Y Yes N No	character	1
Join_name	The name of the container of more of one conditional dependency. Valid only if the Is_conditional_dependency column is set to Y .	string	16
Join_quantity	The number of dependencies that must be satisfied in the join specified in Join_name . Valid only if the Is_conditional_dependency column is set to Y .	integer	5
Output_cond_list	The list of output conditions for this job stream dependency. Valid only if the Is_conditional_dependency column is set to Y .	string	2000

PLAN_JOB_STREAM_SUCCESSORS_V

The PLAN_JOB_STREAM_SUCCESSORS_V view displays information about jobs and job streams successors of a job stream in the plan.

Table 31. The PLAN_JOB_STREAM_SUCCESSORS_V view

Column name	Description	Type	Length
Job_stream_name	The name of the job stream on which the successor is defined.	string	16

Table 31. The PLAN_JOB_STREAM_SUCCESSORS_V view (continued)

Column name	Description	Type	Length
Job_stream_wks_id	The identifier of the workstation of the job stream on which the successor is defined.	character	16
Job_stream_wks_name	A hexadecimal identifier used in the Symphony file to identify the workstation of the job stream on which the dependency is defined.	string	16
Job_stream_wks_original_name	The name of the workstation of the job stream on which the dependency is defined.	string	16
Job_stream_wks_folder_name	The name of the folder in which the workstation of the job stream is defined. The job stream being that on which the dependency is defined.	string	801
Job_stream_wks_folder_id	The identifier of the folder in which the workstation is defined. The workstation being that of the job stream on which the dependency is defined.	character	16
Job_stream_folder_id	The identifier of the folder containing the job stream on which the successor is defined.	character	16
Job_stream_folder_name	The name of the folder containing the job stream on which the successor is defined.	string	801
Job_stream_id	The identifier of the job stream on which the successor is defined.	character	16
Job_stream_succ_id	The identifier of the job stream that follows the job stream specified in the Job_stream_id column.	character	16
Job_succ_js_wks_id	The identifier of the workstation of the job's job stream that follows the job stream specified in the Job_stream_id column.	character	16
Job_succ_js_wks_name	A hexadecimal identifier used in the Symphony file to identify the	string	16

Column name	Description	Type	Length
Job_succ_wks_folder_id	The identifier of the folder containing the workstation of the job that follows the job stream specified in the Job_stream_id column.	character	16
Job_succ_name	The name of the job that follows the job stream specified in the Job_stream_id column.	string	40
Job_stream_succ_wks_id	The identifier of the workstation of the job stream that follows the job stream specified in the Job_stream_id column.	character	16
Job_stream_succ_wks_name	A hexadecimal identifier used in the Symphony file to identify the workstation of the job stream that follows the job stream specified in the Job_stream_id column.	string	16
Job_stream_succ_wks_orig_name	The name of the workstation of the job stream that follows the job stream specified in the Job_stream_id column.	string	16
Job_stream_succ_wks_folder_name	The name of the folder containing the workstation of the job stream that follows the job stream specified in the Job_stream_id column.	string	801
Job_stream_succ_wks_folder_id	The identifier of the folder containing the workstation of the job stream that follows the job stream specified in the Job_stream_id column.	character	16
Job_stream_succ_folder_id	The identifier of the folder containing the job stream that follows the job stream specified in the Job_stream_id column.	character	16
Job_stream_succ_folder_name	The name of the folder containing the job stream that follows the job stream specified in the Job_stream_id column.	string	801
Job_stream_succ_name	The name of the job stream that follows the job stream specified in the Job_stream_id column.	string	16

Table 31. The PLAN_JOB_STREAM_SUCCESSORS_V view (continued)

Column name	Description	Type	Length
Job_stream_succ_sched_time	The input arrival time of the workstation of the job stream that follows the job stream specified in the Job_stream_id column.	timestamp	10
Satisfied	If the job stream's dependency is satisfied. Possible values are: Y Yes N No	character	1
Status	The job stream's dependency status. Possible values are: S Satisfied N Not_satisfied U Undecided	character	1

PLAN_JOB_SUCCESSORS_V

The PLAN_JOBS_SUCCESSORS_V view displays information about jobs and job streams successors of a job in the plan.

Table 32. The PLAN_JOBS_SUCCESSORS_V view

Column name	Description	Type	Length
Job_name	The name of the job on which the successor is defined.	string	40
Job_stream_wks_id	A hexadecimal identifier used in the Symphony file to identify the workstation of the job's job stream on which the successor is defined.	character	16

Table 32. The PLAN_JOBS_SUCCESSORS_V view (continued)

Column name	Description	Type	Length
Job_stream_wks_original_name	The name of the workstation of the job's job stream on which the successor is defined.	string	16
Job_stream_wks_folder_name	The name of the folder where the workstation of the job stream is defined.	string	801
Job_stream_wks_folder_id	The identifier of the folder where the workstation of the job stream is defined.	character	16
Job_stream_wks_name	The name of the workstation of the job's job stream on which the successor is defined.	string	16
Job_wks_original_name	The original name of the workstation of the job.	string	16
Job_wks_folder_name	The name of the folder where the workstation of the job is defined.	string	801
Job_wks_folder_id	The identifier of the folder where the workstation of the job is defined.	character	16
Job_stream_name	The name of the job's job stream on which the successor is defined.	string	16
Job_wks_id	The identifier of the workstation of the job on which the successor is defined.	character	16
Job_wks_name	The name of the workstation of the job on which the successor is defined.	string	16
Job_id	The identifier of the job on which the successor is defined.	character	16
Job_stream_succ_id	The identifier of the job stream that follows the job specified in the Job_id column.	character	16
Job_succ_id	The identifier of the job that follows the job specified in the Job_id column.	character	16
Job_succ_js_wks_id	The identifier of the workstation of the job's job stream that follows the job specified in the Job_id column.	character	16

Table 32. The PLAN_JOBS_SUCCESSORS_V view (continued)

Column name	Description	Type	Length
Job_succ_js_wks_name	A hexadecimal identifier used in the Symphony file to identify the workstation of the job's job stream that follows the job specified in the Job_id column.	string	16
Job_succ_js_wks_original_name	The name of the workstation of the job's job stream that follows the job specified in the Job_id column.	string	16
Job_succ_js_wks_folder_name	The name of the folder containing the workstation of the job's job stream that follows the job specified in the Job_id column.	string	801
Job_succ_js_wks_folder_id	The identifier of the folder containing the workstation of the job's job stream that follows the job specified in the Job_id column.	character	16
Job_succ_js_name	The name of the job's job stream that follows the job specified in the Job_id column.	string	16
Job_succ_js_sched_time	The input arrival time of the job's job stream that follows the job specified in the Job_id column.	timestamp	10
Job_succ_wks_id	The identifier of the workstation of the job that follows the job specified in the Job_id column.	character	16
Job_succ_wks_name	A hexadecimal identifier used in the Symphony file to identify the workstation of the job that follows the job specified in the Job_id column.	string	16
Job_succ_wks_original_name	The name of the workstation of the job that follows the job specified in the Job_id column.	string	16
Job_succ_wks_folder_name	The name of the folder containing the workstation of the job that follows the job specified in the Job_id column.	string	801

Table 32. The PLAN_JOBS_SUCCESSORS_V view (continued)

Column name	Description	Type	Length
Job_succ_wks_folder_id	The identifier of the folder containing the workstation of the job that follows the job specified in the Job_id column.	character	16
Job_succ_name	The name of the job that follows the job specified in the Job_id column.	string	40
Job_stream_succ_wks_name	The name of the workstation of the job stream that follows the job specified in the Job_id column.	string	16
Job_stream_succ_wks_orig_name	The original name of the workstation of the job stream that follows the job specified in the Job_id column.	string	16
Job_stream_succ_wks_fol_name	The name of the folder containing the workstation of the job stream that follows the job specified in the Job_id column.	string	801
Job_stream_succ_wks_folder_id	The identifier of the folder containing the workstation of the job stream that follows the job specified in the Job_id column.	character	16
Job_stream_succ_folder_id	The identifier of the folder containing the job stream that follows the job specified in the Job_id column.	character	16
Job_stream_succ_folder_name	The name of the folder containing the job stream that follows the job specified in the Job_id column.	string	801
Job_stream_succ_name	The name of the job stream that follows the job specified in the Job_id column.	string	16
Job_stream_succ_sched_time	The input arrival time of the workstation of the job stream that follows the job specified in the Job_id column.	timestamp	10
Satisfied	If the job's dependency is satisfied. Possible values are: Y Yes	character	1

Table 32. The PLAN_JOBS_SUCCESSIONS_V view (continued)

Column name	Description	Type	Length
Status	N		
	No		
	The job's dependency status. Possible values are:	character	1
	S		
	Satisfied		
	N		
	Not_satisfied		
	U		
	Undecided		

PLAN_JOB_STREAMS_V

The PLAN_JOB_STREAMS_V view displays information about job streams in the plan.

Table 33. The PLAN_JOB_STREAMS_V view

Column name	Description	Type	Length
Job_stream_id	The job stream identifier.	character	16
Workstation_id	The identifier of the workstation of the job stream specified in the Job_stream_id column.	character	16
Workstation_name	A hexadecimal identifier used in the Symphony file to identify the workstation of the job stream specified in the Job_stream_id column.	string	16
Workstation_original_name	The name of the workstation.	string	16
Workstation_folder_name	The name of the folder where the workstation is defined.	string	801
Workstation_folder_id	The identifier of the folder where the workstation is defined.	character	16

Table 33. The PLAN_JOB_STREAMS_V view (continued)

Column name	Description	Type	Length
Job_stream_folder_id	The identifier of the folder containing the job stream specified in the Job_stream_id column.	character	16
Job_stream_folder_name	The name of the folder containing the job stream specified in the Job_stream_id column.	string	801
Job_stream_name	The name of the job stream specified in the Job_stream_id column.	string	16
Scheduled_time	The input arrival time of the job stream specified in the Job_stream_id column.	timestamp	10
Internal_identifier	The unique alphanumeric job stream identifier that is automatically generated by HCL Workload Automation and assigned to the job stream.	character	16
Actual_start	The time at which the job stream specified in the Job_stream_id column actually started, if it has completed running.	timestamp	10
Deadline	The time within which the job stream specified in the Job_stream_id column must complete.	timestamp	10
Earliest_start	The date and time at which the job stream specified in the Job_stream_id column is planned to start.	timestamp	10
Latest_start	The latest time at which the job stream specified in the Job_stream_id column must be completed.	timestamp	10
Estimated_duration	The expected duration time of the job stream specified in the Job_stream_id column.	integer	12
Jobs_limit	The number of jobs in the job stream specified in the Job_stream_id column that can run concurrently.	integer	4
Status	The job stream status. Possible values are: C Canceled	character	1

Table 33. The PLAN_JOB_STREAMS_V view (continued)

Column name	Description	Type	Length
Internal_status	H Held	character	1
	W Waiting		
	B Blocked		
	R Ready		
	S Running		
	O Successful		
	E Error		
	U Undecided		
	X Suppressed		
	The job stream internal status. Possible values are:		
	A Ready		
	B Hold		
	C Exec		
	D Exec_bm		
	E Stuck		

Table 33. The PLAN_JOB_STREAMS_V view (continued)

Column name	Description	Type	Length
	F Abend		
	G Succ		
	H Cancel		
	I Unknown		
	J User_stream		
	K Cancel_p		
	L Add		
	M Restart_job		
	N Fail		
	O Mpe_susp		
	P Mpe_wait		
	Q Mpe_intro		
	R Mpe_intro_bm		
	S Mpe_waitd		
	T Mpe_sched		

Table 33. The PLAN_JOB_STREAMS_V view (continued)

Column name	Description	Type	Length
	U Abend_p		
	V Succ_p		
	W End_p		
	X Extrn		
	Y Error		
	Z Held		
	1 Jss		
	2 Fence		
	3 Bound		
Late	If the job stream is late. Possible values are:	character	1
	Y Yes		
	N No		
Monitored	If the job stream is monitored. Possible values are:	character	1
	Y Yes		
	N No		

Table 33. The PLAN_JOB_STREAMS_V view (continued)

Column name	Description	Type	Length
Original_job_stream	The original name of the job stream, for job streams that are submitted with an alias name.	string	16
Record_number	The record number.	integer	12
Elapsed_time	The amount of time that the job stream took to run, for this run.	integer	12
Priority	The priority assigned to the job stream specified in the Job_stream_id column.	integer	3
Original_priority	The original priority assigned to the job stream specified in the Job_stream_id column.	integer	3
Total_jobs	The number of total jobs in the job stream specified in the Job_stream_id column.	integer	10
Abend_jobs	The number of abended jobs in the job stream specified in the Job_stream_id column.	integer	10
Executing_jobs	The number of executing jobs in the job stream specified in the Job_stream_id column.	integer	10
Failed_jobs	The number of failed jobs in the job stream specified in the Job_stream_id column.	integer	10
Successful_jobs	The number of successful jobs in the job stream specified in the Job_stream_id column.	integer	10
Not_running_jobs	The number of not running jobs in the job stream specified in the Job_stream_id column.	integer	10
Undecided_jobs	The number of undecided jobs in the job stream specified Job_stream_id column.	integer	10
Total_dependencies	The number of dependencies of the job stream specified in the Job_stream_id column.	integer	5
Job_dependencies	The number of job dependencies of the job stream specified in the Job_stream_id column.	integer	5

Table 33. The PLAN_JOB_STREAMS_V view (continued)

Column name	Description	Type	Length
Job_stream_dependencies	The number of job stream dependencies of the job stream specified in the Job_stream_id column.	integer	5
Internetwork_dependencies	The number of internetwork dependencies of the job stream specified in the Job_stream_id column.	integer	5
Prompt_dependencies	The number of prompt dependencies of the job stream specified in the Job_stream_id column.	integer	5
Resource_dependencies	The number of resource dependencies of the job stream specified in the Job_stream_id column.	integer	5
File_dependencies	The number of file dependencies of the job stream specified in the Job_stream_id column.	integer	5
Unresolved_dependencies	The number of unresolved dependencies of the job stream specified in the Job_stream_id column.	integer	5
Timezone	Time zone of the job stream specified in the Job_stream_id column.	string	40

PLAN_JOBS_V

The PLAN_JOBS_V view displays information about jobs in plan.

Table 34. The PLAN_JOBS_V view

Column name	Description	Type	Length
Job_id	The job identifier.	character	16
Job_workstation_id	The identifier of the workstation of the job specified in the Job_id column.	character	16
Job_workstation_folder_id	The identifier of the folder containing the workstation of the job specified in the Job_id column.	character	16
Job_workstation_folder_name	The name of the folder containing the workstation of the job specified in the Job_id column.	string	801

Table 34. The PLAN_JOBS_V view (continued)

Column name	Description	Type	Length
Job_workstation_name	A hexadecimal identifier used in the Symphony file to identify the workstation of the job specified in the Job_id column.	string	16
Job_workstation_original_name	The identifier of the workstation of the job specified in the Job_id column.	string	16
Job_name	The name of the job specified in the Job_id column.	string	40
Job_stream_workstation_id	The identifier of the workstation of the job's job stream specified in the Job_id column.	character	16
Job_stream_id	The identifier of the job stream of the job specified in the Job_id column.	character	16
Job_stream_wks_fol_id	The identifier of the folder containing the workstation of the job's job stream specified in the Job_id column.	character	16
Job_stream_wks_fol_name	The name of the folder containing the workstation of the job's job stream specified in the Job_id column.	string	801
Job_stream_workstation_name	The name of the workstation of the job's job stream specified in the Job_id column.	string	16
Job_stream_wks_orig_name	The identifier of the original workstation of the job's job stream specified in the Job_id column.	string	16
Job_stream_name	The name of the job's job stream specified in the Job_id column.	string	16
Scheduled_time	The input arrival time of the job's job stream specified in the Job_id column.	timestamp	10
Job_type	The type of job specified in the Job_id column.	string	50
Actual_start	The time at which the job specified in the Job_id column actually started, if it has completed running.	timestamp	10
Actual_end	The time at which the job specified in the Job_id column actually finished, if it has completed running.	timestamp	10
Deadline	The time within which the job specified in the Job_id column must complete.	timestamp	10
Earliest_start	The date and time at which the job specified in the Job_id column is planned to start.	timestamp	10
Estimated_duration	The estimated run time for the job specified in the Job_id column.	integer	12
Status	The job status. Possible values are:	character	1

Table 34. The PLAN_JOBS_V view (continued)

Column name	Description	Type	Length
Internal_status	C Canceled	character	1
	H Held		
	W Waiting		
	B Blocked		
	R Ready		
	S Running		
	O Successful		
	E Error		
	U Undecided		
	X Suppressed		
	The job internal status. Possible values are:		
	A Ready		
	B Hold		
	C Exec		
	D Exec_bm		

Table 34. The PLAN_JOBS_V view (continued)

Column name	Description	Type	Length
E	Stuck

	T Mpe_sched		
	U Abend_p		
	V Succ_p		
	W End_p		
	X Extrn		
	Y Error		
	Z Held		
	1 Jss		
	2 Fence		
	3 Bound		
Job_number	For UNIX, the process identification number (PID) of the job. For Windows, the an incremental number assigned by HCL Workload Automation.	integer	10
Priority	The priority assigned to the job specified in the Job_id column.	integer	3
Original_priority	The original priority assigned to the job specified in the Job_id column.	integer	3
Return_code	The return code assigned to the job specified in the Job_id column.	integer	10
Record_number	The record number.	integer	12
Maximum_duration	The maximum amount of time that the job run can last.	integer	12
Minimum_duration	The minimum amount of time that the job run must last.	integer	12

Table 34. The PLAN_JOBS_V view (continued)

Column name	Description	Type	Length
Critical	If the job is critical. Possible values are: Y Yes N No	character	1
Critical_latest_start	The latest time that the specified in the Job_id column can start, so as to allow the critical job (for which this job is a predecessor) to complete successfully.	timestamp	10
Monitored	If the job is monitored. Possible values are: Y Yes N No	character	1
Promoted	If the job is promoted. Possible values are: Y Yes N No	character	1
Every_frequency	The time interval in hours and minutes between runs of the job specified in the Job_id column.	integer	12
Latest_start	The latest time that the job specified in the Job_id column can start, expressed in the time zone set.	timestamp	10
Interactive	If the job is interactive. Possible values are: Y Yes N No	character	1
Return_code_mapping	The mapping between the job return code and the expression.	string	256
Task_string	The task that the job performs.	string	1048 576

Table 34. The PLAN_JOBS_V view (continued)

Column name	Description	Type	Length
Total_dependencies	The total number of dependencies that depend on the job specified in the Job_id column.	integer	5
Job_dependencies	The number of jobs that depend on the job specified in the Job_id column.	integer	5
Job_stream_dependencies	The number of job streams that depend on the job specified in the Job_id column.	integer	5
Internetwork_dependencies	The number of internetwork jobs that depend on the job specified in the Job_id column.	integer	5
Prompt_dependencies	The number of prompts that depend on the job specified in the Job_id column.	integer	5
Resource_dependencies	The number of resources that depend on the job specified in the Job_id column.	integer	5
File_dependencies	The number of files that depend on the job specified in the Job_id column.	integer	5
Not_satisfied_dependencies	The number of dependencies that depend on the job specified in the Job_id column but that are not satisfied.	integer	5
Login	The name of the operating system user who launches the job specified in the Job_id column.	string	47
Last_in_chain	If the job is the last in the rerun chain. Possible values are: Y Yes N No	character	1
Rerun_type	The job rerun type. Possible values are: R Rerun as E Rerun every F Rerun from	character	1

Table 34. The PLAN_JOBS_V view (continued)

Column name	Description	Type	Length
Recovery_option	C Recovery rerun	character	1
	The job recovery option. Possible values are:		
	S Stop		
	C Continue		
	R Rerun		
Recovery_repeat_interval	The interval in milliseconds after which a new execution of the job is launched if the job failed	integer	12
Recovery_repeat_occurrences	The number of maximum attempts to rerun the job if it failed	integer	5
Recovery_repeat_affinity	Specify whether the failed job must be rerun on the same workstation or the target workstation must be selected by the broker. Supported values are:	character	1
	Y Yes: rerun on the same workstation.		
	N No: the target workstation must be selected by the broker.		
Recovery_repeat_iterations	The actual number of attempts to rerun the failed job	integer	5
Recovery_job_id	The identifier of the recovery job.	character	16
Head_job_id	The identifier of the head job of the rerun chain related to the job specified in the Job_id column.	character	16
Head_job_name	The name of the head job of the rerun chain related to the job specified in the Job_id column.	string	40

PLAN_PROMPT_REFS_V

The PLAN_PROMPT_REFS_V view displays information about jobs and job streams in the plan that depend on a prompt.

Table 35. The PLAN_PROMPT_REFS_V view

Column name	Description	Type	Length
Prompt	The name of the prompt on which the dependency is defined.	string	148
Prompt_number	The number of the prompt specified in the Prompt_id column.	integer	10
Message_text	The text message of the prompt specified in the Prompt_id column.	string	200
Prompt_id	The identifier of the prompt on which the dependency is defined.	character	16
Job_stream_refs_id	The identifier of the job stream that depends on the prompt specified in the Prompt_id column.	character	16
Job_refs_id	The identifier of the job that depends on the prompt specified in the Prompt_id column.	character	16
Job_refs_js_wks_name	A hexadecimal identifier used in the Symphony file to identify the workstation of the job's job stream that depends on the prompt specified in the Prompt_id column.	string	16
Job_refs_js_wks_original_name	The name of the workstation of the job's job stream that depends on the prompt specified in the Prompt_id column.	string	16
Jobs_refs_js_wks_folder_id	The identifier of the folder in which the workstation is defined. The workstation is of the job's job stream that depends on the prompt specified in the Prompt_id column.	character	16
Jobs_refs_js_wks_folder_name	The name of the folder in which the workstation is defined. The workstation is of the job's job stream that depends on the prompt specified in the Prompt_id column.	string	801
Job_refs_js_id	The identifier of the job's job stream that depends on the prompt specified in the Prompt_id column.	character	16
Job_refs_js_name	The name of the job's job stream that depends on the prompt specified in the Prompt_id column.	string	16
Job_refs_js_sched_time	The input arrival time of the job's job stream that depends on the prompt specified in the Prompt_id column.	timestamp	10
Job_refs_wks_id	The identifier of the workstation of the job that depends on the prompt specified in the Prompt_id column.	character	16
Job_refs_wks_name	A hexadecimal identifier used in the Symphony file to identify the workstation of the of the job that depends on the prompt specified in the Prompt_id column.	string	16
Job_refs_wks_original_name	The name of the workstation of the job that depends on the prompt specified in the Prompt_id column.	string	16

Table 35. The PLAN_PROMPT_REFS_V view (continued)

Column name	Description	Type	Length
Jobs_refs_wks_folder_id	The identifier of the folder in which the workstation is defined. The workstation is of the job that depends on the prompt specified in the Prompt_id column.	character	16
Jobs_refs_wks_folder_name	The name of the folder in which the workstation is defined. The workstation is of the job that depends on the prompt specified in the Prompt_id column.	string	801
Job_stream_refs_folder_name	The name of the folder in which the job stream is defined. The job stream that depends on the prompt specified in the Prompt_id column.	string	801
Job_stream_refs_folder_id	The identifier of the folder in which the job stream is defined. The job stream that depends on the prompt specified in the Prompt_id column.	character	16
Job_refs_name	The name of the job that depends on the prompt specified in the Prompt_id column.	string	40
Job_stream_refs_wks_id	The identifier of the workstation of the job stream that depends on the prompt specified in the Prompt_id column.	character	16
Job_stream_refs_wks_name	A hexiadecimal identifier used in the Symphony file to identify the workstation of the of the job stream that depends on the prompt specified in the Prompt_id .	string	16
Job_stream_wks_original_name	The name of the workstation of the job stream that depends on the prompt specified in the Prompt_id column.	string	16
Job_stream_wks_folder_id	The identifier of the folder containing the workstation of the job stream that depends on the prompt specified in the Prompt_id column.	character	16
Job_stream_wks_folder_name	The name of the folder containing the workstation of the job stream that depends on the prompt specified in the Prompt_id column.	string	801
Job_stream_refs_name	The name of the job stream that depends on the prompt specified in the Prompt_id column.	string	16
Job_stream_refs_sched_time	The input arrival time of the job stream that depends on the prompt specified in the Prompt_id column.	timestamp	10
Satisfied	If the prompt dependency is satisfied. Possible values are: Y Yes	character	1

Table 35. The PLAN_PROMPT_REFS_V view (continued)

Column name	Description	Type	Length
Prompt_type	N	character	1
	No		
	The prompt type. Possible values are:		
	L		
Status	Ad-hoc	character	1
	G		
	Predefined		
	R		
	Restart		
	The prompt status. Possible values are:		
	A		
	Asked		
	T		
	Not_asked		
	Y		
	Answered_yes		
	N		
	Answered_no		

PLAN_PROMPTS_V

The PLAN_PROMPTS_V view displays information about prompts in the plan.

Table 36. The PLAN_PROMPTS_V view

Column name	Description	Type	Length
Prompt_id	The identifier of the prompt.	character	16
Prompt_name	The name of the prompt.	string	148
Prompt_number	The number of the prompt.	integer	10
Workstation_id	The workstation identifier.	character	16
Workstation_name	A hexadecimal identifier used in the Symphony file to identify the workstation.	string	16

Table 36. The PLAN_PROMPTS_V view (continued)

Column name	Description	Type	Length
Workstation_original_name	The workstation name.	string	16
Workstation_folder_id	The identifier of the folder in which the workstation is defined.	character	16
Workstation_folder_name	The name of the folder in which the workstation is defined.	string	801
Asked_time	The time on which the prompt is asked.	timestamp	10
Status	The prompt status. Possible values are: A Available N Not_available U Undecided	character	1
Message_text	Text of the message.	string	200
Prompt_type	The prompt type. Possible values are: L Local G Global R Restart	character	1

PLAN_RESOURCE_REFS_V

The PLAN_RESOURCE_REFS_V view displays information about jobs and job streams in the plan that depend on a resource.

Table 37. The PLAN_RESOURCE_REFS_V view

Column name	Description	Type	Length
Resource_name	The name of the resource on which the dependency is defined.	string	148
Quantity_defined	The total quantity defined on the resource specified in the Resource_id column.	integer	4
Quantity_available	The quantity of the resource specified in the Resource_id column that is not used.	integer	4

Table 37. The PLAN_RESOURCE_REFS_V view (continued)

Column name	Description	Type	Length
In_use	The quantity in use on the resource specified in the Resource_id column.	integer	4
Resource_wks_id	The identifier of the workstation on which the resource specified in the Resource_id column is defined.	character	16
Resource_wks_name	A hexiadecimal identifier used in the Symphony file to identify the workstation	string	16
Resource_wks_original_name	The name of the workstation on which the resource specified in the Resource_id column is defined.	string	16
Resource_wks_folder_id	The identifier of the folder containing the workstation on which the resource specified in the Resource_id column is defined.	character	16
Resource_wks_folder_name	The name of the folder containing the workstation on which the resource specified in the Resource_id column is defined. .	string	801
Resource_id	The identifier of the resource on which the dependency is defined.	character	16
Job_stream_refs_id	The identifier of the job stream that depends on the resource specified in the Resource_id column.	character	16
Job_refs_id	The identifier of the job that depends on the resource specified in the Resource_id column.	character	16
Job_refs_js_wks_name	A hexadecimal identifier used in the Symphony file to identify the workstation of the job's job stream that depends on the resource specified in the Resource_id column.	string	16
Job_refs_js_wks_original_name	The name of the workstation of the job's job stream that depends on the resource specified in the Resource_id column.	string	16
Jobs_refs_js_wks_folder_id	The identifier of the folder in which the workstation is defined. The workstation is of the job's job stream that depends on the resource specified in the Resource_id column.	character	16
Jobs_refs_js_wks_folder_name	The name of the folder in which the workstation is defined. The workstation is of the job's job stream that depends on the resource specified in the Resource_id column.	string	801
Job_refs_js_id	The identifier of the job's job stream that depends on the resource specified in the Resource_id column.	character	16
Job_refs_js_name	The name of the job's job stream that depends on the resource specified in the Resource_id column.	string	16

Table 37. The PLAN_RESOURCE_REFS_V view (continued)

Column name	Description	Type	Length
Job_refs_js_sched_time	The input arrival time of the job's job stream that depends on the resource specified in the Resource_id column.	timestamp	10
Job_refs_wks_id	The identifier of the workstation of the job that depends on the resource specified in the Resource_id column.	character	16
Job_refs_wks_name	A hexadecimal identifier used in the Symphony file to identify the workstation of the of the job that depends on the resource specified in the Resource_id column.	string	16
Job_refs_wks_original_name	The name of the workstation of the job that depends on the resource specified in the Resource_id column.	string	16
Jobs_refs_wks_folder_id	The identifier of the folder in which the workstation is defined. The workstation is of the job that depends on the resource specified in the Resource_id column.	character	16
Jobs_refs_wks_folder_name	The name of the folder in which the workstation is defined. The workstation is of the job that depends on the resource specified in the Resource_id column.	string	801
Job_refs_name	The name of the job that depends on the resource specified in the Resource_id column.	string	40
Job_stream_refs_wks_id	The identifier of the workstation of the job stream that depends on the resource specified in the Resource_id column.	character	16
Job_stream_refs_wks_name	A hexadecimal identifier used in the Symphony file to identify the workstation of the job stream that depends on the resource specified in the Resource_id column.	string	16
Job_stream_wks_original_name	The name of the workstation of the job stream that depends on the resource specified in the Resource_id column.	string	16
Job_stream_wks_folder_id	The identifier of the folder in which the workstation of the job stream is defined. The job stream that depends on the resource specified in the Resource_id column.	character	16
Job_stream_wks_folder_name	The name of the folder in which the workstation of the job stream is defined. The job stream that depends on the resource specified in the Resource_id column.	string	801
Job_stream_refs_name	The name of the job stream that depends on the resource specified in the Resource_id column.	string	16
Job_stream_refs_folder_id	The identifier of the folder containing the job stream that depends on the resource specified in the Resource_id column.	character	16

Table 37. The PLAN_RESOURCE_REFS_V view (continued)

Column name	Description	Type	Length
Job_stream_refs_folder_name	The name of the folder containing the job stream that depends on the resource specified in the Resource_id column.	string	801
Job_stream_refs_sched_time	The input arrival time of the workstation of the job stream that depends on the resource specified in the Resource_id column.	timestamp	10
Satisfied	If the resource dependency is satisfied. Possible values are: Y Yes N No	character	1
Status	The resource status. Possible values are: A Available N Not_available N Undecided	character	1

PLAN_RESOURCES_V

The PLAN_RESOURCES_V view displays information about resources in the plan.

Table 38. The PLAN_RESOURCES_V view

Column name	Description	Type	Length
Resource_id	The identifier of the resource.	character	16
Resource_name	The name of the resource.	string	148
Resource_number	The number of the resource.	integer	10
Workstation_id	The identifier of the workstation.	character	16
Workstation_name	A hexadecimal identifier used in the Symphony file to identify the workstation.	string	16
Workstation_original_name	The workstation name.	string	16
Workstation_folder_id	The identifier of the folder in which the workstation is defined.	character	16

Table 38. The PLAN_RESOURCES_V view (continued)

Column name	Description	Type	Length
Workstation_folder_name	The name of the folder in which the workstation is defined.	string	801
Status	The resource status. Possible values are: A Available N Not_available U Undecided	character	1
Available	The number of units available for the resource specified in the Resource_id column.	integer	4
Not_used	The number of units for the resource specified in the Resource_id column that are not used.	integer	4
In_use	The number of units in use for the resource specified in the Resource_id column.	integer	4

PLAN_WORKSTATIONS_V

The PLAN_WORKSTATIONS_V view displays information about workstations in the plan.

Table 39. The PLAN_WORKSTATIONS_V view

Column name	Description	Type	Length
Workstation_id	The identifier of the workstation.	character	16
Domain_id	The identifier of the domain of the workstation specified in the Workstation_id column.	character	16
Host_workstation_id	The identifier of the workstation that hosts the workstation specified in the Workstation_id column.	character	16
Method	The name of the access method for extended agents workstations.	string	40
Workstation_type	The workstation type status. Possible values are: M Manager	character	1

Table 39. The PLAN_WORKSTATIONS_V view (continued)

Column name	Description	Type	Length
	F FTA X XA S SA B Broker A Agent L Pool Y Dynamic_pool E Remote_engine		
Behind_firewall	If the workstation is behind the firewall. Possible values are:	character	1
	Y Yes N No		
Fence	The job fence for the workstation specified in the Workstation_id column.	integer	3
Agent_initialized	If the jobman process is initialized. Possible values are:	character	1
	Y Yes N No		
Agent_running	If the jobman process is running. Possible values are:	character	1

Table 39. The PLAN_WORKSTATIONS_V view (continued)

Column name	Description	Type	Length
	Y Yes		
	N No		
Limit	The total number of jobs that can be run concurrently on the workstation specified in the Workstation_id column.	integer	4
Link_status	The workstation link status. Possible values are:	character	1
	L Linked		
	U Unlinked		
	F Fully_linked		
	N Not_applicable		
Workstation_name	A hexadecimal identifier used in the Symphony file to identify the workstation.	string	16
Workstation_original_name	The name of the workstation	string	16
Node_name	The node name of the workstation.	string	51
Ssl_communication	The workstation SSL communication level. Possible values are:	character	1
	O On		
	N None		
	E Enabled		
	F Force		
	H Http		

Table 39. The PLAN_WORKSTATIONS_V view (continued)

Column name	Description	Type	Length
	S		
	Https		
Mailman_server	The name of the mailman server responsible for the Workstation_id on the domain manager. It is for fault-tolerant and standard agents only.	character	1
Ssl_port	The number of the secure port to be used for SSL communication.	integer	5
Monitor_config_updated	If the monitor configuration is updated. Possible values are:	character	1
	Y		
	Yes		
	N		
	No		
Start_time	The date and time when the <code>batchman</code> process was started on the workstation.	timestamp	10
Run_number	The run number of the current plan running on the workstation. This is used to synchronize the workstations in a HCL Workload Automation network.	integer	10
Node_port	The port number of the workstation.	integer	5
Time_zone	The time zone set on the workstation.	string	40
Node_information	The operating system information of the workstation.	string	64
Version	The HCL Workload Automation version that runs on the workstation.	string	8
Writer_running	If the writer is running. Possible values are:	character	1
	Y		
	Yes		
	N		
	No		
Event_processor	If the event processor is running. Possible values are:	character	1
	Y		
	Yes		
	N		
	No		

Table 39. The PLAN_WORKSTATIONS_V view (continued)

Column name	Description	Type	Length
Event_monitoring	If the event monitoring is running. Possible values are: Y Yes N No	character	1
Workstation_folder_name	The name of the folder where the workstation is defined.	string	801
Workstation_folder_id	The identifier of the folder where the workstation is defined.	character	16

PROMPTS_V

The PROMPTS_V view displays information about prompts.

Table 40. The PROMPTS_V view

Column name	Description	Type	Length
Prompt_identifier	The identifier of the prompt.	character	16
Prompt_name	The name of the prompt.	string	148
Prompt_fol_id	The identifier of the folder where the prompt is stored.	character	16
Prompt_fol_name	The name of the folder where the prompt is stored.	string	801
Prompt_Symphony_id	The Symphony ID of the folder where the prompt is stored.	string	16
Prompt_value	The text associated with the prompt.	string	200

Output example

[Table 41: PROMPTS_V view output example on page 105](#) shows an example of the output for the PROMPTS_V view.

Table 41. PROMPTS_V view output example

```

PROMPT_NAME      PROMPT_VALUE
-----
JOBSTATCOMP      Reply y when statitistics complete
JOBSALCOMP       Reply y when salary has been calculated
PROMPTSTAT       Reply y when statitistics completed successfully

3 record(s) selected.
```

PROMPT_REFS_V

The PROMPT_REFS_V view displays information about jobs and job streams that depend on a prompt.

Table 42. The PROMPT_REFS_V view

Column name	Description	Type	Length
Prompt_identifier	The identifier of the prompt on which the jobs and job streams depend.	character	16
Prompt_name	The name of the prompt on which the jobs and job streams depend.	string	148
Prompt_fol_id	The identifier of the folder where the prompt is stored.	character	16
Prompt_fol_name	The name of the folder where the prompt is stored.	string	801
Prompt_Symphony_id	The Symphony ID of the folder where the prompt is stored.	string	16
Prompt_text	The text associated with the prompt.	string	200
Dep_job_stream_wks_identifier	The identifier of the workstation where the job stream that depends on the prompt specified in the Prompt_identifier column is defined.	character	16
Dep_job_stream_wks_name	The name of the workstation where the job stream that depends on the prompt specified in the Prompt_name column is defined.	string	16
Dep_job_stream_folder_id	The identifier of the folder containing the job stream that depends on the prompt specified in the Prompt_identifier column.	character	16
Dep_job_stream_folder_name	The name of the folder containing job stream that depends on the prompt specified in the Prompt_identifier column.	string	801
Dep_job_stream_identifier	The identifier of the job stream that depends on the prompt specified in the Prompt_identifier column.	string	16
Dep_job_stream_name	The name of the job stream that depends on the prompt specified in the Prompt_name column.	string	16
Dep_job_stream_valid_from	The starting date from which the dependent job stream is included in a production plan if selected by a run cycle.	date	10 In D B2® 9 In Or

Table 42. The PROMPT_REFS_V view (continued)

Column name	Description	Type	Length
			a cle
Dep_job_stream_valid_to	The last date that the dependent job stream is included in a production plan if selected by a run cycle.	date	10
			In D B2®
			9
			In Or a cle
Dep_job_wks_identifier	The identifier of the workstation where the job that depends on the prompt specified in the Prompt_identifier column is defined.	character	16
Dep_job_wks_name	The name of the workstation where the job that depends on the prompt specified in the Prompt_name column is defined.	string	16
Dep_job_name	The name of the job that depends on the prompt specified in the Prompt_name column.	string	40
Dep_job_identifier	The identifier of the job that depends on the prompt specified in the Prompt_identifier column.	character	16
Dep_job_folder_id	The identifier of the folder containing the job that depends on the prompt specified in the Prompt_identifier column.	character	16
Dep_job_folder_name	The name of the folder containing job that depends on the prompt specified in the Prompt_identifier column.	string	801
Dep_job_definition_identifier	The identifier of the job definition that depends on the prompt specified in the Prompt_identifier column.	character	16
Dep_job_definition_name	The name of the job definition that depends on the prompt specified in the Prompt_name column.	string	40
Dep_job_stream_wks_folder_id	The identifier of the folder containing the workstation of the job stream that depends on the prompt specified in the Prompt_name column.	character	16

Table 42. The PROMPT_REFS_V view (continued)

Column name	Description	Type	Length
Dep_job_stream_wks_folder_name	The name of the folder containing the workstation of the job stream that depends on the prompt specified in the Prompt_name column.	string	801
Dep_job_stream_wks_symphony_id	An identifier used in the Symphony file to identify the workstation of the job stream that depends on the prompt specified in the Prompt_name column.	string	16
Dep_job_wks_folder_id	The identifier of the folder in which the workstation is defined. The workstation is of the job that depends on the prompt specified in the Prompt_name column.	character	16
Dep_job_wks_folder_name	The name of the folder in which the workstation is defined. The workstation is of the job that depends on the prompt specified in the Prompt_name column.	string	801
Dep_job_wks_symphony_id	An identifier used in the Symphony file to identify the workstation of the job that depends on the prompt specified in the Prompt_name column.	string	16

PROPERTIES_V

The PROPERTIES_V view displays information about global options and properties.

Table 43. The PROPERTIES_V view

Column name	Description	Type	Length
Property_name	The name of the property.	string	50
Property_value	The value of the property.	string	256

REMOTE_JOB_REQUESTS_V

This view shows the details of the request to bind to a job on a remote engine. The bind request is sent to the remote engine where the job instance resides. Every bind request contains the information to identify the job's instance in the remote engine plan.

Table 44. The REMOTE_JOB_REQUESTS_V view

Column name	Description	Type	Length
Remote_job_identifier	The identifier of the shadow job in the remote engine.	varchar	1000
Remote_job_start_time	The time used to identify the remote job instance in the local plan.	timestamp	10

Table 44. The REMOTE_JOB_REQUESTS_V view (continued)

Column name	Description	Type	Length
Interval_start_offset	The relative or absolute offset to define the start of the interval where to look for remote predecessor job instance in the local plan. This column is filled in when a <i>relative</i> or <i>absolute</i> interval based matching criteria is specified in the shadow job definition.	decimal	10
Interval_end_offset	The relative or absolute offset to define the end of the interval where to look for remote predecessor job instance in the local plan. This column is filled in when a <i>relative</i> or <i>absolute</i> interval based matching criteria is specified in the shadow job definition.	decimal	10
Local_workstation_name	The name of the job stream workstation to match in the local plan. It is referenced in the shadow job definition on the remote engine.	varchar	1000
Local_job_stream_name	The name of the job stream to match in the local engine plan. It is referenced in the shadow job definition on the remote engine.	varchar	1000
Local_job_name	The name of the job to match in the local plan. It is referenced in the shadow job definition on the remote engine.	varchar	1000
Local_job_start_time	The time of the job stream instance matched in the local plan.	timestamp	10
Matching_criteria	The matching criteria used to find the required job stream instance to match in the local plan. These are the possible values for this field: B Closest preceding D On the same day A Within an absolute interval R Within a relative interval	character	1
Request_status	The result of the bind request. The request status says whether an existing job instance in the local engine plan matched or not the remote job information specified in the shadow job definition. These are the possible values for this field: 0 The subscription has been received.	decimal	2

Table 44. The REMOTE_JOB_REQUESTS_V view (continued)

Column name	Description	Type	Length
	1		
	The subscription is waiting for the bind in the Long Term Plan (LTP).		
	2		
	The subscription has been bound in the Long Term Plan.		
	3		
	The subscription is waiting for the bind in the Current Plan (CP).		
	4		
	The subscription has been bound in the Current Plan.		
	5		
	The bind in Long Term Plan failed.		
	6		
	The bind in Current Plan failed.		
Notification_URI	The URI where to send back the notification about the remote job status. It is the URI identifying the remote engine where the shadow job is defined.	varchar	1024

RESOURCES_V

The RESOURCES_V view displays information about resources.

Table 45. The RESOURCES_V view

Column name	Description	Type	Length
Workstation_identifier	The identifier of the workstation or workstation class associated with the resource.	character	16
Workstation_name	The name of the workstation or workstation class associated with the resource.	string	16
Resource_name	The name of the resource.	string	148
Resource_fol_id	The identifier of the folder where the resource is stored.	character	16
Resource_fol_name	The name of the folder where the resource is stored.	string	801
Resource_Symphony_id	The Symphony ID of the folder where the resource is stored.	string	16

Table 45. The RESOURCES_V view (continued)

Column name	Description	Type	Length
Resource_identifier	The identifier of the resource.	character	16
Resource_description	The description associated with the resource.	string	120
Resource_units	The number of this resource available.	integer	4
Workstation_folder_id	The identifier of the folder in which the workstation is defined.	character	16
Workstation_folder_name	The name of the folder in which the workstation is defined.	string	801
Workstation_symphony_id	An identifier used in the Symphony file to identify the workstation.	string	16

Output example

Table 46: RESOURCES_V view output example on page 111 shows an example of the output for the RESOURCES_V view.

RUN_CYCLE_REFS_V

The RUN_CYCLE_REFS_V view displays information about when job streams run.

Table 49. The RUN_CYCLE_REFS_V view

Column name	Description	Type	Length
Job_stream_wks_identifier	The identifier of the workstation where the job stream is defined.	character	16
Job_stream_wks_name	The name of the workstation where the job stream is defined.	string	16
Job_stream_folder_id	The identifier of the folder that contains the job stream.	character	16
Job_stream_folder_name	The name of the folder that contains the job stream.	string	4000 Oracle 4095 DB2
Job_stream_identifier	The identifier of the job stream.	character	16
Job_stream_name	The name of the job stream.	string	16
Job_stream_valid_from	The starting date from which the job stream is included in a production plan if selected by a run cycle.	date	10 In D B2® 9 In Or a cle
Job_stream_valid_to	The last date that the job stream is included in a production plan if selected by a run cycle.	date	10 In D B2® 9 In Or a cle
Run_cycle_identifier	The identifier of the run cycle associated with the job stream.	character	16
Run_cycle_name	The name of the run cycle associated with the job stream.	string	40

Table 49. The RUN_CYCLE_REFS_V view (continued)

Column name	Description	Type	Length
Run_cycle_valid_from	The starting date from which the run cycle is included in a production plan.	date	10 In D B2® 9 In Or a cle
Run_cycle_valid_to	The last date that the run cycle is included in a production plan.	date	10 In D B2® 9 In Or a cle
Run_cycle_type	The type of run cycle associated with the job stream. Possible values are: S Simple C Calendar-based R Rule-based	character	1
Run_cycle_definition	The rules defined for the run cycle. If this field is not specified, the run cycle associated with the job stream and specified in the Run_cycle_type column is calendar-based.	string	not defined
Free_days_rule	The non-working day rule associated with the run cycle. Possible values are:	character	1

Table 49. The RUN_CYCLE_REFS_V view (continued)

Column name	Description	Type	Length
	N None. Follow no rule. Schedule the job stream regardless of whether the schedule falls on a non-working day or on a workday.		
	B Nearest workday before a non-working day. Counts both workdays and non-working days. If the scheduled date falls on a non-working day, schedule the job stream on the preceding workday.		
	A Nearest workday after a non-working day. Counts both workdays and non-working days. If the scheduled date falls on a non-working day, schedule the job stream on the following workday.		
	X Do not select. Counts both workdays and non-working days. If the scheduled date falls on a non-working day, do not schedule the job stream.		
Run_cycle_inclusive	Whether the run cycle associated with the job stream is inclusive or exclusive. Possible values are: Y Inclusive N Exclusive	character	1
Calendar_identifier	The identifier of the calendar on which the run cycle is defined.	character	16
Calendar_name	The name of the calendar on which the run cycle is defined.	string	16
Calendar_folder_id	The identifier of the folder where the calendar is stored.	character	16

Table 49. The RUN_CYCLE_REFS_V view (continued)

Column name	Description	Type	Length
Calendar_folder_name	The name of the folder where the calendar is stored.	string	801
Offset_type	The type of offset associated with the calendar on which the run cycle is defined. Possible values are: D Days. The day indicated in the calendar plus the specified offset value. W Workdays. The day indicated in the calendar plus the number of workdays. A Weekdays. The day indicated in the calendar plus the weekdays (Monday to Friday).	character	1
Offset_value	The value of the offset associated with the offset type.	integer	4
Job_stream_wks_folder_id	The identifier of the folder containing the workstation of the job stream.	character	16
Job_stream_wks_folder_name	The name of the folder containing the workstation of the job stream.	string	801
Job_stream_wks_symphony_id	An identifier used in the Symphony file to identify the workstation of the job stream.	string	16

Output example

Table 50: RUN_CYCLE_REFS_V view output example on page 119 shows an example of the output for the RUN_CYCLE_REFS_V view.

VARIABLES_V

Table 51. The VARIABLES_V view

The VARIABLES_V view displays information about global parameters, from now on variables.

Column name	Description	Type	Length
Variable_table_identifier	The identifier of the variable table that contains the variable.	character	16
Variable_table	The name of the variable table that contains the variable.	string	80
Variable_identifier	The identifier of the variable.	character	16
Variable_name	The name of the variable.	string	8
Variable_value	The value associated with the variable.	string	72

For more information, see *User's Guide and Reference - Customizing your workload using variable tables*.

Output example

Table 52: VARIABLES_V view output example on page 120 shows an example of the output for the VARIABLES_V view.

VARIABLE_TABLE_REFS_V

Table 53. The VARIABLE_TABLE_REFS_V view

The VARIABLE_TABLE_REFS_V view displays information about job streams, run cycles, and workstations that use variable tables.

Column name	Description	Type	Length
Variable_table_identifier	The identifier of the variable table that contains the variable.	character	16
Variable_table	The name of the variable table that contains the variable.	string	80
Variable_table_folder_id	The identifier of the folder where the variable table is stored.	character	16
Variable_table_folder_name	The name of the folder where the variable table is stored.	string	801
Is_default	If the variable table is the default variable table. Possible values are: Y Yes N No	character	1
Workstation_identifier	The identifier of the workstation that uses the variable table or the name of the workstation on which the job stream that uses the variable table is defined.	character	16
Workstation_name	The name of the workstation that uses the variable table or the name of the workstation on which the job stream that uses the variable table is defined.	string	16
Job_stream_folder_id	The identifier of the folder that contains the job stream that uses the variable table.	character	16

Column name	Description	Type	Length
Job_stream_folder_name	The name of the folder that contains the job stream that uses the variable table.	string	4000 Oracle 4095 DB2
Job_stream_identifier	The identifier of the job stream that uses the variable table.	character	16
Job_stream_name	The name of the job stream that uses the variable table.	string	16
Job_stream_valid_from	The starting date from which the job stream that uses the variable table is included in a production plan if selected by a run cycle.	date	10 In DB2® 9 In Oracle
Job_stream_valid_to	The last date that the dependent job stream that uses the variable table is included in a production plan if selected by a run cycle.	date	10 In DB2® 9 In Oracle
Run_cycle_identifier	The identifier of the run cycle that uses the variable table.	character	16
Run_cycle_name	The name of the run cycle that uses the variable table.	string	40
Workstation_folder_id	The identifier of the folder in which the workstation is defined.	character	16
Workstation_folder_name	The name of the folder in which the workstation is defined.	string	801
Workstation_symphony_id	An identifier used in the Symphony file to identify the workstation.	string	16
